*django-fobi* (or just *fobi*) is a customisable, modular, user- and developer- friendly form generator/builder application for Django. With *fobi* you can build Django forms using an intuitive GUI, save or mail posted form data or even export forms into JSON format and import them on other instances. API allows you to build your own form elements and form handlers (mechanisms for handling the submitted form data).

---

### Prerequisites

---

- Django 1.5, 1.6, 1.7, 1.8, 1.9
- Python  $\geq 2.6.8$ ,  $\geq 2.7$ ,  $\geq 3.3$

Note, that Django 1.10 is not yet proclaimed to be flawlessly supported, however it's in progress. The latest core and contrib packages (from master branch, with no additional dependencies) have been tested against the latest stable Django 1.10 release. All tests have successfully passed, although it's yet too early to claim that Django 1.10 is fully supported.

---

### Key concepts

---

- Each form consists of elements. Form elements are divided into two groups:
  1. form fields (input field, textarea, hidden field, file field, etc.).
  2. content (presentational) elements (text, image, embed video, etc.).
- Number of form elements is not limited.
- Each form may contain handlers. Handler processes the form data (for example, saves it or mails it). Number of the handlers is not limited.
- Both form elements and form handlers are made with Django permission system in mind.
- As an addition to form handlers, form callbacks are implemented. Form callbacks are fired on various stages of pre- and post-processing the form data (on POST). Form callbacks do not make use of permission system (unless you intentionally do so in the code of your callback) and are fired for all forms (unlike form handlers, that are executed only if assigned).
- Each plugin (form element or form handler) or a callback - is a Django micro-app.

Note, that *django-fobi* does not require django-admin and administrative rights/permissions to access the UI, although almost seamless integration with django-admin is implemented through the `simple` theme.

---

## Main features and highlights

---

- User-friendly GUI to quickly build forms.
- Large variety of *Bundled form element plugins*. Most of the Django fields are supported. *HTML5 fields* are supported as well.
- Anti-spam solutions like *CAPTCHA*, *ReCAPTCHA* or *Honeypot* come out of the box (*CAPTCHA* and *ReCAPTCHA* do require additional third-party apps to be installed).
- In addition to standard form elements, there are cosmetic (presentational) form elements (for adding a piece of text, image or a embed video) alongside standard form elements.
- Data handling in plugins (form handlers). Save the data, mail it to some address or repost it to some other endpoint. See the *Bundled form handler plugins* for more information.
- Developer-friendly API, which allows to edit existing or build new form fields and handlers without touching the core.
- Support for custom user model.
- *Theming*. There are 4 ready to use *Bundled themes*: “Bootstrap 3”, “Foundation 5”, “Simple” (with editing interface in style of Django admin) and “DjangoCMS admin style” theme (which is another simple theme with editing interface in style of *djangoCMS-admin-style*).
- *Form wizards*.
- Implemented *integration with FeinCMS* (in a form of a FeinCMS page widget).
- Implemented *integration with DjangoCMS* (in a form of a DjangoCMS page plugin).
- Implemented *integration with Mezzanine* (in a form of a Mezzanine page).
- Reordering of form elements using drag-n-drop.
- Data export (*DB store* form handler plugin) into XLS/CSV format.
- *Dynamic initial values* for form elements.
- Import/export forms to/from JSON format.
- Import forms from MailChimp using *mailchimp importer*.

---

### Roadmap

---

Some of the upcoming/in-development features/improvements are:

- Form-wizards (in version 0.8).
- Integration with *django-rest-framework* (in version 0.9).

See the [TODOs](#) for the full list of planned-, pending- in-development- or to-be-implemented features.

---

## Some screenshots

---

See the documentation for some screen shots:

- [PythonHosted](#)
- [ReadTheDocs](#)

---

## Demo

---

### Live demo

See the [live demo app](#) on Heroku.

Credentials:

- username: test\_user
- password: test\_user

### Run demo locally

In order to be able to quickly evaluate the *django-fobi*, a demo app (with a quick installer) has been created (works on Ubuntu/Debian, may work on other Linux systems as well, although not guaranteed). Follow the instructions below for having the demo running within a minute.

Grab the latest *django\_fobi\_example\_app\_installer.sh*:

```
wget https://raw.githubusercontent.com/barseghyanartur/django-fobi/stable/examples/django_fobi_example_app_installer.sh
```

Assign execute rights to the installer and run the *django\_fobi\_example\_app\_installer.sh*:

```
chmod +x django_fobi_example_app_installer.sh
./django_fobi_example_app_installer.sh
```

Open your browser and test the app.

Dashboard:

- URL: <http://127.0.0.1:8001/fobi/>
- Admin username: test\_admin
- Admin password: test

Django admin interface:

- URL: <http://127.0.0.1:8001/admin/>
- Admin username: test\_admin
- Admin password: test

If quick installer doesn't work for you, see the manual steps on running the [example project](#).

---

**Quick start**

---

See the [quick start](#).

---

## Installation

---

1. Install latest stable version from PyPI:

```
pip install django-fobi
```

Or latest stable version from GitHub:

```
pip install -e git+https://github.com/barseghyanartur/django-fobi@stable#egg=django-fobi
```

Or latest stable version from BitBucket:

```
pip install -e hg+https://bitbucket.org/barseghyanartur/django-fobi@stable#egg=django-fobi
```

2. Add *fobi* to `INSTALLED_APPS` of the your projects' Django settings. Furthermore, all themes and plugins to be used, shall be added to the `INSTALLED_APPS` as well. Note, that if a plugin has additional dependencies, you should be mentioning those in the `INSTALLED_APPS` as well.

```
INSTALLED_APPS = (  
    # Used by fobi  
    'django.contrib.auth',  
    'django.contrib.contenttypes',  
    'django.contrib.sessions',  
    'django.contrib.sites',  
    'django.contrib.messages',  
    'django.contrib.staticfiles',  
    'django.contrib.admin',  
  
    # ...  
    # `django-fobi` core  
    'fobi',  
  
    # `django-fobi` themes  
    'fobi.contrib.themes.bootstrap3', # Bootstrap 3 theme  
    'fobi.contrib.themes.foundation5', # Foundation 5 theme  
    'fobi.contrib.themes.simple', # Simple theme  
  
    # `django-fobi` form elements - fields  
    'fobi.contrib.plugins.form_elements.fields.boolean',  
    'fobi.contrib.plugins.form_elements.fields.checkbox_select_multiple',  
    'fobi.contrib.plugins.form_elements.fields.date',  
    'fobi.contrib.plugins.form_elements.fields.date_drop_down',  
    'fobi.contrib.plugins.form_elements.fields.datetime',  
    'fobi.contrib.plugins.form_elements.fields.decimal',  
    'fobi.contrib.plugins.form_elements.fields.email',  
    'fobi.contrib.plugins.form_elements.fields.file',
```

```
'fobi.contrib.plugins.form_elements.fields.float',
'fobi.contrib.plugins.form_elements.fields.hidden',
'fobi.contrib.plugins.form_elements.fields.input',
'fobi.contrib.plugins.form_elements.fields.integer',
'fobi.contrib.plugins.form_elements.fields.ip_address',
'fobi.contrib.plugins.form_elements.fields.null_boolean',
'fobi.contrib.plugins.form_elements.fields.password',
'fobi.contrib.plugins.form_elements.fields.radio',
'fobi.contrib.plugins.form_elements.fields.regex',
'fobi.contrib.plugins.form_elements.fields.select',
'fobi.contrib.plugins.form_elements.fields.select_model_object',
'fobi.contrib.plugins.form_elements.fields.select_multiple',
'fobi.contrib.plugins.form_elements.fields.select_multiple_model_objects',
'fobi.contrib.plugins.form_elements.fields.slug',
'fobi.contrib.plugins.form_elements.fields.text',
'fobi.contrib.plugins.form_elements.fields.textarea',
'fobi.contrib.plugins.form_elements.fields.time',
'fobi.contrib.plugins.form_elements.fields.url',

# `django-fobi` form elements - content elements
'fobi.contrib.plugins.form_elements.test.dummy',
'easy_thumbnails', # Required by `content_image` plugin
'fobi.contrib.plugins.form_elements.content.content_image',
'fobi.contrib.plugins.form_elements.content.content_text',
'fobi.contrib.plugins.form_elements.content.content_video',

# `django-fobo` form handlers
'fobi.contrib.plugins.form_handlers.db_store',
'fobi.contrib.plugins.form_handlers.http_repost',
'fobi.contrib.plugins.form_handlers.mail',

# Other project specific apps
'foo', # Test app
# ...
)
```

3. Make appropriate changes to the `TEMPLATE_CONTEXT_PROCESSORS` of the your projects' Django settings.

And the following to the context processors.

```
TEMPLATE_CONTEXT_PROCESSORS = (
    # ...
    "fobi.context_processors.theme",
    # ...
)
```

Make sure that `django.core.context_processors.request` is in `TEMPLATE_CONTEXT_PROCESSORS` too.

#### 4. Configure URLs

Add the following line to `urlpatterns` of your `urls` module.

```
# View URLs
url(r'^fobi/', include('fobi.urls.view')),

# Edit URLs
url(r'^fobi/', include('fobi.urls.edit')),
```

Note, that some plugins require additional URL includes. For instance, if you listed the

*fobi.contrib.plugins.form\_handlers.db\_store* form handler plugin in the `INSTALLED_APPS`, you should mention the following in *urls* module.

```
# DB Store plugin URLs
url(r'^fobi/plugins/form-handlers/db-store/',
    include('fobi.contrib.plugins.form_handlers.db_store.urls')),
```

View URLs are put separately from edit URLs in order to make it possible to prefix the edit URLs differently. For example, if you're using the "Simple" theme, you would likely want to prefix the edit URLs with "admin/" so that it looks more like django-admin.

---

## Creating a new form element plugin

---

Form element plugins represent the elements of which the forms is made: Inputs, checkboxes, textareas, files, hidden fields, as well as pure presentational elements (text or image). Number of form elements in a form is not limited.

Presentational form elements are inherited from `fobi.base.FormElementPlugin`.

The rest (real form elements, that are supposed to have a value) are inherited from `fobi.base.FormFieldPlugin`.

You should see a form element plugin as a Django micro app, which could have its' own models, admin interface, etc. *django-fobi* comes with several bundled form element plugins. Do check the source code as example.

Let's say, you want to create a textarea form element plugin.

There are several properties, each textarea should have. They are:

- *label* (string): HTML label of the textarea.
- *name* (string): HTML name of the textarea.
- *initial* (string): Initial value of the textarea.
- *required* (bool): Flag, which tells us whether the field is required or optional.

Let's name that plugin *sample\_textarea*. The plugin directory should then have the following structure.

```
path/to/sample_textarea/  
-- __init__.py  
-- fobi_form_elements.py # Where plugins are defined and registered  
-- forms.py # Plugin configuration form  
-- widgets.py # Where plugins widgets are defined
```

Form element plugins should be registered in “`fobi_form_elements.py`” file. Each plugin module should be put into the `INSTALLED_APPS` of your Django projects' settings.

In some cases, you would need plugin specific overridable settings (see `fobi.contrib.form_elements.fields.content.content_image` plugin as an example). You are advised to write your settings in such a way, that variables of your Django project settings module would have `FOBI_PLUGIN_` prefix.

## Define and register the form element plugin

Step by step review of a how to create and register a plugin and plugin widgets. Note, that *django-fobi* auto-discovers your plugins if you place them into a file named *fobi\_form\_elements.py* of any Django app listed in `INSTALLED_APPS` of your Django projects' settings module.

## path/to/sample\_textarea/fobi\_form\_elements.py

A single form element plugin is registered by its' UID.

Required imports.

```
from django import forms
from fobi.base import FormFieldPlugin, form_element_plugin_registry
from path.to.sample_textarea.forms import SampleTextareaForm
```

Defining the Sample textarea plugin.

```
class SampleTextareaPlugin(FormFieldPlugin):
    """Sample textarea plugin."""

    uid = "sample_textarea"
    name = "Sample Textarea"
    form = SampleTextareaForm
    group = "Samples" # Group to which the plugin belongs to

    def get_form_field_instances(self, request=None):
        kwargs = {
            'required': self.data.required,
            'label': self.data.label,
            'initial': self.data.initial,
            'widget': forms.widgets.Textarea(attrs={})
        }

        return [(self.data.name, forms.CharField, kwargs),]
```

Registering the SampleTextareaPlugin plugin.

```
form_element_plugin_registry.register(SampleTextareaPlugin)
```

Note, that in case you want to define a pure presentational element, make use of `fobi.base.FormElementPlugin` for subclassing, instead of `fobi.base.FormFieldPlugin`. See the source of the content plugins (`fobi.contrib.plugins.form_elements.content`) as an example.

For instance, the captcha and honeypot fields are implemented as form elements (subclasses the `fobi.base.FormElementPlugin`). The `db_store` form handler plugin does not save the form data of those elements. If you want the form element data to be saved, do inherit from `fobi.base.FormFieldPlugin`.

Hidden form element plugins, should be also having set the `is_hidden` property to `True`. By default it's set to `False`. That makes the hidden form elements to be rendered using as `django.forms.widgets.TextInput` widget in edit mode. In the view mode, the original widget that you assigned in your form element plugin would be used.

There might be cases, when you need to do additional handling of the data upon the successful form submission. In such cases, you will need to define a `submit_plugin_form_data` method in the plugin, which accepts the following arguments:

- *form\_entry* (`fobi.models.FormEntry`): Form entry, which is being submitted.
- *request* (`django.http.HttpRequest`): The Django HTTP request.
- *form* (`django.forms.Form`): Form object (a valid one, which contains the `cleaned_data` attribute).

Example (taken from `fobi.contrib.plugins.form_elements.fields.file`):

```
def submit_plugin_form_data(self, form_entry, request, form):
    """Submit plugin form data."""
    # Get the file path
    file_path = form.cleaned_data.get(self.data.name, None)
```

```

if file_path:
    # Handle the upload
    saved_file = handle_uploaded_file(FILE_UPLOAD_DIR, file_path)
    # Overwrite ``cleaned_data`` of the ``form`` with path to moved
    # file.
    form.cleaned_data[self.data.name] = "{0}{1}".format(
        settings.MEDIA_URL, saved_file
    )

    # It's critically important to return the ``form`` with updated
    # ``cleaned_data``
    return form

```

In the example below, the original form is being modified. If you don't want the original form to be modified, do not return anything.

Check the file form element plugin (`fobi.contrib.plugins.form_elements.fields.file`) for complete example.

## path/to/sample\_textarea/forms.py

Why to have another file for defining forms? Just to keep the code clean and less messy, although you could perfectly define all your plugin forms in the module `fobi_form_elements.py`, it's recommended to keep it separate.

Take into consideration, that `forms.py` is not an autodiscovered file pattern. All your form element plugins should be registered in modules named `fobi_form_elements.py`.

Required imports.

```

from django import forms
from fobi.base import BasePluginForm

```

Form for for SampleTextareaPlugin form element plugin.

```

class SampleTextareaForm(forms.Form, BasePluginForm):
    """Sample textarea form."""
    plugin_data_fields = [
        ("name", ""),
        ("label", ""),
        ("initial", ""),
        ("required", False)
    ]

    name = forms.CharField(label="Name", required=True)
    label = forms.CharField(label="Label", required=True)
    initial = forms.CharField(label="Initial", required=False)
    required = forms.BooleanField(label="Required", required=False)

```

Note that although it's not being checked in the code, but for form field plugins the following fields should be present in the plugin form (`BasePluginForm`) and the form plugin (`FormFieldPlugin`):

- name

In some cases, you might want to do something with the data before it gets saved. For that purpose, `save_plugin_data` method has been introduced.

See the following example.

```

def save_plugin_data(self, request=None):
    """Saving the plugin data and moving the file."""
    file_path = self.cleaned_data.get('file', None)

```

```
if file_path:
    saved_image = handle_uploaded_file(IMAGES_UPLOAD_DIR, file_path)
    self.cleaned_data['file'] = saved_image
```

## path/to/sample\_textarea/widgets.py

Required imports.

```
from fobi.base import FormElementPluginWidget
```

Defining the base plugin widget.

```
class BaseSampleTextareaPluginWidget(FormElementPluginWidget):
    """Base sample textarea plugin widget."""

    # Same as ``uid`` value of the ``SampleTextareaPlugin``.
    plugin_uid = "sample_textarea"
```

## path/to/sample\_layout/fobi\_form\_elements.py

Register in the registry (in some module which is for sure to be loaded; it's handy to do it in the theme module).

Required imports.

```
from fobi.base import form_element_plugin_widget_registry
from path.to.sample_textarea.widgets import BaseSampleTextareaPluginWidget
```

Define the theme specific plugin.

```
class SampleTextareaPluginWidget(BaseSampleTextareaPluginWidget):
    """Sample textarea plugin widget."""

    theme_uid = 'bootstrap3' # Theme for which the widget is loaded
    media_js = ['sample_layout/js/fobi.plugins.form_elements.sample_textarea.js',]
    media_css = ['sample_layout/css/fobi.plugins.form_elements.sample_textarea.css',]
```

Register the widget.

```
form_element_plugin_widget_registry.register(SampleTextareaPluginWidget)
```

## Form element plugin final steps

Now, that everything is ready, make sure your plugin module is added to `INSTALLED_APPS`.

```
INSTALLED_APPS = (
    # ...
    'path.to.sample_textarea',
    # ...
)
```

Afterwards, go to terminal and type the following command.

```
./manage.py fobi_sync_plugins
```

If your HTTP server is running, you would then be able to see the new plugin in the edit form interface.

Dashboard URL: <http://127.0.0.1:8000/fobi/>

Note, that you have to be logged in, in order to use the dashboard. If your new plugin doesn't appear, set the `FOBI_DEBUG` to `True` in your Django's local settings module, re-run your code and check console for error notifications.

---

## Creating a new form handler plugin

---

Form handler plugins handle the form data. *django-fobi* comes with several bundled form handler plugins, among which is the `db_store` and `mail` plugins, which are responsible for saving the submitted form data into the database and mailing the data to recipients specified. Number of form handlers in a form is not limited. Certain form handlers are not configurable (for example the `db_store` form handler isn't), while others are (`mail`, `http_repost`).

You should see a form handler as a Django micro app, which could have its' own models, admin interface, etc.

By default, it's possible to use a form handler plugin multiple times per form. If you wish to allow form handler plugin to be used only once in a form, set the `allow_multiple` property of the plugin to `False`.

As said above, *django-fobi* comes with several bundled form handler plugins. Do check the source code as example.

### Define and register the form handler plugin

Let's name that plugin *sample\_mail*. The plugin directory should then have the following structure.

```
path/to/sample_mail/
-- __init__.py
-- fobi_form_handlers.py # Where plugins are defined and registered
-- forms.py # Plugin configuration form
```

Form handler plugins should be registered in “fobi\_form\_handlers.py” file. Each plugin module should be put into the `INSTALLED_APPS` of your Django projects' settings.

#### path/to/sample\_mail/fobi\_form\_handlers.py

A single form handler plugin is registered by its' UID.

Required imports.

```
import json
from django.core.mail import send_mail
from fobi.base import FormHandlerPlugin, form_handler_plugin_registry
from path.to.sample_mail.forms import SampleMailForm
```

Defining the Sample mail handler plugin.

```
class SampleMailHandlerPlugin(FormHandlerPlugin):
    """Sample mail handler plugin."""

    uid = "sample_mail"
```

```
name = _("Sample mail")
form = SampleMailForm

def run(self, form_entry, request, form):
    """To be executed by handler."""
    send_mail(
        self.data.subject,
        json.dumps(form.cleaned_data),
        self.data.from_email,
        [self.data.to_email],
        fail_silently=True
    )
```

Some form handlers are configurable, some others not. In order to have a user friendly way of showing the form handler settings, what's sometimes needed, a `plugin_data_repr` method has been introduced. Simplest implementation of it would look as follows:

```
def plugin_data_repr(self):
    """Human readable representation of plugin data.

    :return string:
    """
    return self.data.__dict__
```

## path/to/sample\_mail/forms.py

If plugin is configurable, it has configuration data. A single form may have unlimited number of same plugins. Imagine, you want to have different subjects and additional body texts for different user groups. You could then assign two form handler mail plugins to the form. Of course, saving the posted form data many times does not make sense, but it's up to the user. So, in case if plugin is configurable, it should have a form.

Why to have another file for defining forms? Just to keep the code clean and less messy, although you could perfectly define all your plugin forms in the module `fobi_form_handlers.py`, it's recommended to keep it separate.

Take into consideration, that `forms.py` is not an autodiscovered file pattern. All your form handler plugins should be registered in modules named `fobi_form_handlers.py`.

Required imports.

```
from django import forms
from django.utils.translation import ugettext_lazy as _
from fobi.base import BasePluginForm
```

Defining the form for Sample mail handler plugin.

```
class MailForm(forms.Form, BasePluginForm):
    """Mail form."""

    plugin_data_fields = [
        ("from_name", ""),
        ("from_email", ""),
        ("to_name", ""),
        ("to_email", ""),
        ("subject", ""),
        ("body", ""),
    ]

    from_name = forms.CharField(label=_("From name"), required=True)
```

```

from_email = forms.EmailField(label=_("From email"), required=True)
to_name = forms.CharField(label=_("To name"), required=True)
to_email = forms.EmailField(label=_("To email"), required=True)
subject = forms.CharField(label=_("Subject"), required=True)
body = forms.CharField(label=_("Body"), required=False,
                        widget=forms.widgets.Textarea)

```

After the plugin has been processed, all its’ data is available in a `plugin_instance.data` container (for example, `plugin_instance.data.subject` or `plugin_instance.data.from_name`).

## Prioritise the execution order

Some form handlers shall be executed prior others. A good example of such, is a combination of “mail” and “db\_save” form handlers for the form. In case if large files are posted, submission of form data would fail if “mail” plugin would be executed after “db\_save” has been executed. That’s why it’s possible to prioritise that ordering in a `FOBI_FORM_HANDLER_PLUGINS_EXECUTION_ORDER` setting variable.

If not specified or left empty, form handler plugins would be ran in the order of discovery. All form handler plugins that are not listed in the `FORM_HANDLER_PLUGINS_EXECUTION_ORDER`, would be ran after the plugins that are mentioned there.

```

FORM_HANDLER_PLUGINS_EXECUTION_ORDER = (
    'http_repost',
    'mail',
    # The 'db_store' is left out intentionally, since it should
    # be the last plugin to be executed.
)

```

## Form handler plugin custom actions

By default, a single form handler plugin has at least a “delete” action. If plugin is configurable, it gets an “edit” action as well.

For some of your plugins, you may want to register a custom action. For example, the “db\_store” plugin does have one, for showing a link to a listing page with saved form data for the form given.

For such cases, define a `custom_actions` method in your form handler plugin. That method shall return a list of triples. In each triple, first value is the URL, second value is the title and the third value is the icon of the URL.

The following example is taken from the “db\_store” plugin.

```

def custom_actions(self):
    """Adding a link to view the saved form entries.

    :return iterable:
    """
    return (
        (
            reverse('fobi.contrib.plugins.form_handlers.db_store.view_saved_form_data_entries'),
            _("View entries"),
            'glyphicon glyphicon-list'
        ),
    )

```

## Form handler plugin final steps

Do not forget to add the form handler plugin module to `INSTALLED_APPS`.

```
INSTALLED_APPS = (  
    # ...  
    'path.to.sample_mail',  
    # ...  
)
```

Afterwards, go to terminal and type the following command.

```
./manage.py fobi_sync_plugins
```

If your HTTP server is running, you would then be able to see the new plugin in the edit form interface.

---

## Creating a new form importer plugin

---

Form importer plugins import the forms from some external data source into *django-fobi* form format. Number of form importers is not limited. Form importers are implemented in forms of wizards (since they may contain several steps).

You should see a form importer as a Django micro app, which could have its' own models, admin interface, etc.

At the moment *django-fobi* comes with only one bundled form handler plugin, which is the `mailchimp_importer`, which is responsible for importing existing MailChimp forms into *django-fobi*.

### Define and register the form importer plugin

Let's name that plugin *sample\_importer*. The plugin directory should then have the following structure.

```
path/to/sample_importer/
-- templates
|   -- sample_importer
|       -- 0.html
|       -- 1.html
-- __init__.py
-- fobi_form_importers.py # Where plugins are defined and registered
-- forms.py # Wizard forms
-- views.py # Wizard views
```

Form importer plugins should be registered in “`fobi_form_importers.py`” file. Each plugin module should be put into the `INSTALLED_APPS` of your Django projects' settings.

#### path/to/sample\_importer/fobi\_form\_importers.py

A single form importer plugin is registered by its' UID.

Required imports.

```
from django.utils.translation import gettext_lazy as _
from fobi.form_importers import BaseFormImporter, form_importer_plugin_registry
from fobi.contrib.plugins.form_elements import fields
from path.to.sample_importer.views import SampleImporterWizardView
```

Defining the Sample importer plugin.

```
class SampleImporterPlugin(FormHandlerPlugin):
    """Sample importer plugin."""

    uid = 'sample_importer'
    name = _("Sample importer")
    wizard = SampleImporterWizardView
    templates = [
        'sample_importer/0.html',
        'sample_importer/1.html',
    ]

    # field_type (at importer): uid (django-fobi)
    fields_mapping = {
        # Implemented
        'email': fields.email.UID,
        'text': fields.text.UID,
        'number': fields.integer.UID,
        'dropdown': fields.select.UID,
        'date': fields.date.UID,
        'url': fields.url.UID,
        'radio': fields.radio.UID,

        # Transformed into something else
        'address': fields.text.UID,
        'zip': fields.text.UID,
        'phone': fields.text.UID,
    }

    # Django standard: remote
    field_properties_mapping = {
        'label': 'name',
        'name': 'tag',
        'help_text': 'helptext',
        'initial': 'default',
        'required': 'req',
        'choices': 'choices',
    }

    field_type_prop_name = 'field_type'
    position_prop_name = 'order'

    def extract_field_properties(self, field_data):
        field_properties = {}
        for prop, val in self.field_properties_mapping.items():
            if val in field_data:
                if 'choices' == val:
                    field_properties[prop] = "\n".join(field_data[val])
                else:
                    field_properties[prop] = field_data[val]
        return field_properties

form_importer_plugin_registry.register(SampleImporter)
```

## path/to/sample\_importer/forms.py

As mentioned above, form importers are implemented in form of wizards. The forms are the wizard steps.

Required imports.

```
from django import forms
from django.utils.translation import ugettext_lazy as _
from sample_service_api import sample_api # Just an imaginary API client
```

Defining the form for Sample importer plugin.

```
class SampleImporterStep1Form(forms.Form):
    """First form the the wizard."""

    api_key = forms.CharField(required=True)

class SampleImporterStep2Form(forms.Form):
    """Second form of the wizard."""

    list_id = forms.ChoiceField(required=True, choices=[])

    def __init__(self, *args, **kwargs):
        self._api_key = None

        if 'api_key' in kwargs:
            self._api_key = kwargs.pop('api_key', None)

        super(SampleImporterStep2Form, self).__init__(*args, **kwargs)

        if self._api_key:
            client = sample_api.Api(self._api_key)
            lists = client.lists.list()
            choices = [(l['id'], l['name']) for l in lists['data']]
            self.fields['list_id'].choices = choices
```

## path/to/sample\_importer/views.py

The wizard views.

Required imports.

```
from sample_service_api import sample_api # Just an imaginary API client

from django.shortcuts import redirect
from django.core.urlresolvers import reverse
from django.contrib import messages
from django.utils.translation import ugettext_lazy as _

# For django LTE 1.8 import from `django.contrib.formtools.wizard.views`
from formtools.wizard.views import SessionWizardView

from path.to.sample_importer.forms import (
    SampleImporterStep1Form, SampleImporterStep2Form
)
```

Defining the wizard view for Sample importer plugin.

```
class SampleImporterWizardView(SessionWizardView):
    """Sample importer wizard view."""
```

```
form_list = [SampleImporterStep1Form, SampleImporterStep2Form]

def get_form_kwargs(self, step):
    """Get form kwargs (to be used internally)."""
    if '1' == step:
        data = self.get_cleaned_data_for_step('0') or {}
        api_key = data.get('api_key', None)
        return {'api_key': api_key}
    return {}

def done(self, form_list, **kwargs):
    """After all forms are submitted."""
    # Merging cleaned data into one dict
    cleaned_data = {}
    for form in form_list:
        cleaned_data.update(form.cleaned_data)

    # Connecting to sample client API
    client = sample_client.Api(cleaned_data['api_key'])

    # Fetching the form data
    form_data = client.lists.merge_vars(
        id={'list_id': cleaned_data['list_id']}
    )

    # We need the first form only
    try:
        form_data = form_data['data'][0]
    except Exception as err:
        messages.warning(
            self.request,
            _('Selected form could not be imported due errors.')
        )
        return redirect(reverse('fobi.dashboard'))

    # Actually, import the form
    form_entry = self._form_importer.import_data(
        {'name': form_data['name'], 'user': self.request.user},
        form_data['merge_vars']
    )

    redirect_url = reverse(
        'fobi.edit_form_entry', kwargs={'form_entry_id': form_entry.pk}
    )

    messages.info(
        self.request,
        _('Form {0} imported successfully.').format(form_data['name'])
    )

    return redirect("{0}".format(redirect_url))
```

## Form importer plugin final steps

Do not forget to add the form importer plugin module to `INSTALLED_APPS`.

```
INSTALLED_APPS = (  
    # ...  
    'path.to.sample_importer',  
    # ...  
)
```

Afterwards, go to terminal and type the following command.

```
./manage.py fobi_sync_plugins
```

If your HTTP server is running, you would then be able to see the new plugin in the dashboard form interface (implemented in all bundled themes).

---

## Creating a form callback

---

Form callbacks are additional hooks, that are executed on various stages of the form submission.

Let's place the callback in the *foo* module. The plugin directory should then have the following structure.

```
path/to/foo/  
-- __init__.py  
-- fobi_form_callbacks.py # Where callbacks are defined and registered
```

See the callback example below.

Required imports.

```
from fobi.constants import (  
    CALLBACK_BEFORE_FORM_VALIDATION,  
    CALLBACK_FORM_VALID_BEFORE_SUBMIT_PLUGIN_FORM_DATA,  
    CALLBACK_FORM_VALID, CALLBACK_FORM_VALID_AFTER_FORM_HANDLERS,  
    CALLBACK_FORM_INVALID  
)  
from fobi.base import FormCallback, form_callback_registry
```

Define and register the callback

```
class SampleFooCallback(FormCallback):  
    """Sample foo callback."""  
  
    stage = CALLBACK_FORM_VALID  
  
    def callback(self, form_entry, request, form):  
        """Define your callback code here."""  
        print("Great! Your form is valid!")  
  
form_callback_registry.register(SampleFooCallback)
```

Add the callback module to `INSTALLED_APPS`.

```
INSTALLED_APPS = (  
    # ...  
    'path.to.foo',  
    # ...  
)
```

---

## Suggestions

---

### Custom action for the form

Sometimes, you would want to specify a different action for the form. Although it's possible to define a custom form action (`action` field in the “Form properties” tab), you're advised to use the `http_repost` plugin instead, since then the form would be still validated locally and only then the valid data, as is, would be sent to the desired endpoint.

Take in mind, that if both cases, if CSRF protection is enabled on the endpoint, your post request would result an error.

### When you want to customise too many things

*django-fobi*, with its' flexible form elements, form handlers and form callbacks is very customisable. However, there might be cases when you need to override entire view to fit your needs. Take a look at the [FeinCMS integration](#) or [DjangoCMS integration](#) as a good example of such. You may also want to compare the code from original view `fobi.views.view_form_entry` with the code from the widget to get a better idea of what could be changed in your case. If need a good advice, just ask me.

---

## Theming

---

*django-fobi* comes with theming API. While there are several ready-to-use themes:

- “Bootstrap 3” theme
- “Foundation 5” theme
- “Simple” theme in (with editing interface in style of the Django admin)
- “DjangoCMS admin style” theme (which is another simple theme with editing interface in style of *djangoCMS-admin-style*)

Obviously, there are two sorts of views when it comes to editing and viewing the form.

- The “view-view”, when the form as it has been made is exposed to the site end- users/visitors.
- The “edit-view” (builder view), where the authorised users build their forms.

Both “Bootstrap 3” and “Foundation 5” themes are making use of the same style for both “view-view” and “edit-view” views.

Both “Simple” and “DjangoCMS admin style” themes are styling for the “edit-view” only. The “view-view” is pretty much blank, as shown on the one of the screenshots [2.6].

Have in mind, that creating a brand new theme could be time consuming. Instead, you are advised to extend existing themes or in the worst case, if too much customisation required, create your own themes based on existing ones (just copy the desired theme to your project directory and work it out further).

It’s possible to use different templates for all “view” and “edit” actions (see the source code of the “simple” theme). Both “Bootstrap 3” and “Foundation 5” themes look great. Although if you can’t use any of those, the “Simple” theme is the best start, since it looks just like django-admin.

## Create a new theme

Let’s place the theme in the *sample\_theme* module. The theme directory should then have the following structure.

```
path/to/sample_theme/
-- static
|   -- css
|   |   -- sample_theme.css
|   -- js
|       -- sample_theme.js
-- templates
|   -- sample_theme
|       -- _base.html
```

```
|         -- add_form_element_entry.html
|         -- ...
|         -- view_form_entry_ajax.html
-- __init__.py
-- fobi_form_elements.py
-- fobi_themes.py # Where themes are defined and registered
```

See the theme example below.

```
from django.utils.translation import ugettext_lazy as _

from fobi.base import BaseTheme, theme_registry

class SampleTheme(BaseTheme):
    """Sample theme."""

    uid = 'sample'
    name = _("Sample")

    media_css = (
        'sample_theme/css/sample_theme.css',
        'css/fobi.core.css',
    )

    media_js = (
        'js/jquery-1.10.2.min.js',
        'jquery-ui/js/jquery-ui-1.10.3.custom.min.js',
        'js/jquery.slugify.js',
        'js/fobi.core.js',
        'sample_theme/js/sample_theme.js',
    )

    # Form element specific
    form_element_html_class = 'form-control'
    form_radio_element_html_class = 'radio'
    form_element_checkbox_html_class = 'checkbox'

    form_edit_form_entry_option_class = 'glyphicon glyphicon-edit'
    form_delete_form_entry_option_class = 'glyphicon glyphicon-remove'
    form_list_container_class = 'list-inline'

    # Templates
    master_base_template = 'sample_theme/_base.html'
    base_template = 'sample_theme/base.html'

    form_ajax = 'sample_theme/snippets/form_ajax.html'
    form_snippet_template_name = 'sample_theme/snippets/form_snippet.html'
    form_properties_snippet_template_name = 'sample_theme/snippets/form_properties_snippet.html'
    messages_snippet_template_name = 'sample_theme/snippets/messages_snippet.html'

    add_form_element_entry_template = 'sample_theme/add_form_element_entry.html'
    add_form_element_entry_ajax_template = 'sample_theme/add_form_element_entry_ajax.html'

    add_form_handler_entry_template = 'sample_theme/add_form_handler_entry.html'
    add_form_handler_entry_ajax_template = 'sample_theme/add_form_handler_entry_ajax.html'

    create_form_entry_template = 'sample_theme/create_form_entry.html'
    create_form_entry_ajax_template = 'bootstrap3/create_form_entry_ajax.html'
```

```

dashboard_template = 'sample_theme/dashboard.html'

edit_form_element_entry_template = 'sample_theme/edit_form_element_entry.html'
edit_form_element_entry_ajax_template = 'sample_theme/edit_form_element_entry_ajax.html'

edit_form_entry_template = 'sample_theme/edit_form_entry.html'
edit_form_entry_ajax_template = 'sample_theme/edit_form_entry_ajax.html'

edit_form_handler_entry_template = 'sample_theme/edit_form_handler_entry.html'
edit_form_handler_entry_ajax_template = 'sample_theme/edit_form_handler_entry_ajax.html'

form_entry_submitted_template = 'sample_theme/form_entry_submitted.html'
form_entry_submitted_ajax_template = 'sample_theme/form_entry_submitted_ajax.html'

view_form_entry_template = 'sample_theme/view_form_entry.html'
view_form_entry_ajax_template = 'sample_theme/view_form_entry_ajax.html'

```

Registering the SampleTheme plugin.

```
theme_registry.register(SampleTheme)
```

Sometimes you would want to attach additional properties to the theme in order to use them later in templates (remember, current theme object is always available in templates under name *fobi\_theme*).

For such cases you would need to define a variable in your project's settings module, called `FOBI_CUSTOM_THEME_DATA`. See the following code as example:

```

# `django-fobi` custom theme data for to be displayed in third party apps
# like `django-registrator`.
FOBI_CUSTOM_THEME_DATA = {
    'bootstrap3': {
        'page_header_html_class': '',
        'form_html_class': 'form-horizontal',
        'form_button_outer_wrapper_html_class': 'control-group',
        'form_button_wrapper_html_class': 'controls',
        'form_button_html_class': 'btn',
        'form_primary_button_html_class': 'btn-primary pull-right',
    },
    'foundation5': {
        'page_header_html_class': '',
        'form_html_class': 'form-horizontal',
        'form_button_outer_wrapper_html_class': 'control-group',
        'form_button_wrapper_html_class': 'controls',
        'form_button_html_class': 'radius button',
        'form_primary_button_html_class': 'btn-primary',
    },
    'simple': {
        'page_header_html_class': '',
        'form_html_class': 'form-horizontal',
        'form_button_outer_wrapper_html_class': 'control-group',
        'form_button_wrapper_html_class': 'submit-row',
        'form_button_html_class': 'btn',
        'form_primary_button_html_class': 'btn-primary',
    }
}

```

You would now be able to access the defined extra properties in templates as shown below.

```
<div class="{ fobi_theme.custom_data.form_button_wrapper_html_class }">
```

You likely would want to either remove the footer text or change it. Define a variable in your project's settings module, called `FOBI_THEME_FOOTER_TEXT`. See the following code as example:

```
FOBI_THEME_FOOTER_TEXT = gettext('&copy; django-fobi example site 2014')
```

Below follow the properties of the theme:

- `base_edit`
- `base_view`

There are generic templates made in order to simplify theming. Some of them you would never need to override. Some others, you would likely want to.

Templates that you likely would want to re-write in your custom theme implementation are marked with three asterisks (\*\*\*):

```
generic
-- snippets
|   -- form_ajax.html
|   -- form_edit_ajax.html
|   -- *** form_properties_snippet.html
|   -- *** form_snippet.html
|   -- --- form_edit_snippet.html (does not exist in generic templates)
|   -- --- form_view_snippet.html (does not exist in generic templates)
|   -- form_view_ajax.html
|   -- messages_snippet.html
|
-- _base.html
-- add_form_element_entry.html
-- add_form_element_entry_ajax.html
-- add_form_handler_entry.html
-- add_form_handler_entry_ajax.html
-- base.html
-- create_form_entry.html
-- create_form_entry_ajax.html
-- *** dashboard.html
-- edit_form_element_entry.html
-- edit_form_element_entry_ajax.html
-- edit_form_entry.html
-- *** edit_form_entry_ajax.html
-- edit_form_handler_entry.html
-- edit_form_handler_entry_ajax.html
-- form_entry_submitted.html
-- *** form_entry_submitted_ajax.html
-- *** theme.html
-- view_form_entry.html
-- view_form_entry_ajax.html
```

From all of the templates listed above, the `_base.html` template is the most influenced by the Bootstrap 3 theme.

## Make changes to an existing theme

As said above, making your own theme from scratch could be costly. Instead, you can override/reuse an existing one and change it to your needs with minimal efforts. See the [override simple theme](#) example. In order to see it in action, run the project with `settings_override_simple_theme` option:

```
./manage.py runserver --settings=settings_override_simple_theme
```

Details explained below.

## Directory structure

```
override_simple_theme/
-- static
|   -- override_simple_theme
|       -- css
|           |   -- override-simple-theme.css
|       -- js
|           -- override-simple-theme.js
|
-- templates
|   -- override_simple_theme
|       -- snippets
|           |   -- form_ajax.html
|       -- base_view.html
-- __init__.py
-- fobi_themes.py # Where themes are defined and registered
```

## fobi\_themes.py

Overriding the “simple” theme.

```
__all__ = ('MySimpleTheme',)

from fobi.base import theme_registry

from fobi.contrib.themes.simple.fobi_themes import SimpleTheme

class MySimpleTheme(SimpleTheme):
    """My simple theme, inherited from `SimpleTheme` theme."""

    html_classes = ['my-simple-theme',]
    base_view_template = 'override_simple_theme/base_view.html'
    form_ajax = 'override_simple_theme/snippets/form_ajax.html'
```

Register the overridden theme. Note, that it’s important to set the *force* argument to True, in order to override the original theme. Force can be applied only once (for an overridden element).

```
theme_registry.register(MySimpleTheme, force=True)
```

## templates/override\_simple\_theme/base\_view.html

```
{% extends "simple/base_view.html" %}

{% load static %}

{% block stylesheets %}
<link
  href="{% static 'override_simple_theme/css/override-simple-theme.css' %}"
  rel="stylesheet" media="all" />
```

```
{% endblock stylesheets %}

{% block main-wrapper %}
<div id="sidebar">
  <h2>It's easy to override a theme!</h2>
</div>

{{ block.super }}
{% endblock main-wrapper %}
```

## templates/override\_simple\_theme/snippets/form\_ajax.html

```
{% extends "fobi/generic/snippets/form_ajax.html" %}

{% block form_html_class %}basic-grey{% endblock %}
```

---

## Form wizards

---

### Basics

With form wizards you can split forms across multiple pages. State is maintained in one of the backends (at the moment the Session backend). Data processing is delayed until the submission of the final form.

In *django-fobi* wizards work in the following way:

- Number of forms in a form wizard is not limited.
- Form callbacks, handlers are totally ignored in form wizards. Instead, the form-wizard specific handlers (form wizard handlers) take over handling of the form data on the final step.

### Bundled form wizard handler plugins

Below a short overview of the form wizard handler plugins. See the README.rst file in directory of each plugin for details.

- **DB store**: Stores form data in a database.
- **HTTP repost**: Repost the POST request to another endpoint.
- **Mail**: Send the form data by email.

---

## Permissions

---

Plugin system allows administrators to specify the access rights to every plugin. *django-fobi* permissions are based on Django Users and User Groups. Access rights are manageable via Django admin (“/admin/fobi/formelement/”, “/admin/fobi/formhandler/”). If user doesn’t have the rights to access plugin, it doesn’t appear on his form even if has been added to it (imagine, you have once granted the right to use the news plugin to all users, but later on decided to limit it to Staff members group only). Note, that superusers have access to all plugins.

Plugin access rights management interface in Django admin

`Plugin`	`Users`	`Groups`	
Text	John Doe	Form builder users	
Textarea		Form builder users	
File	Oscar, John Doe	Staff members	
URL		Form builder users	
Hidden		Form builder users	

---

## Management commands

---

There are several management commands available.

- *fobi\_find\_broken\_entries*. Find broken form element/handler entries that occur when some plugin which did exist in the system, no longer exists.
- *fobi\_sync\_plugins*. Should be ran each time a new plugin is being added to the *django-fobi*.
- *fobi\_update\_plugin\_data*. A mechanism to update existing plugin data in case if it had become invalid after a change in a plugin. In order for it to work, each plugin should implement and `update` method, in which the data update happens.

---

## **Tuning**

---

There are number of *django-fobi* settings you can override in the settings module of your Django project:

- *FOBI\_RESTRICT\_PLUGIN\_ACCESS* (bool): If set to True, (Django) permission system for dash plugins is enabled. Defaults to True. Setting this to False makes all plugins available for all users.
- *FOBI\_DEFAULT\_THEME* (str): Active (default) theme UID. Defaults to “bootstrap3”.
- *FORM\_HANDLER\_PLUGINS\_EXECUTION\_ORDER* (list of tuples): Order in which the form handlers are executed. See the “Prioritise the execution order” section for details.

For tuning of specific contrib plugin, see the docs in the plugin directory.

---

## Bundled plugins and themes

---

*django-fobi* ships with number of bundled form element- and form handler- plugins, as well as themes which are ready to be used as is.

### Bundled form element plugins

Below a short overview of the form element plugins. See the README.rst file in directory of each plugin for details.

#### Fields

Fields marked with asterics (\*) fall under the definition of text elements. It's possible to provide *Dynamic initial values* for text elements.

- Boolean (checkbox)
- Date
- DateTime
- Date drop down (year, month, day selection drop-downs)
- Decimal
- Email\*
- File
- Float
- Hidden\*
- Password\*
- Radio select (radio button)
- Input
- IP address\*
- Integer
- Null boolean
- Select (drop-down)
- Select model object (drop-down)

- [Select multiple \(drop-down\)](#)
- [Slug\\*](#)
- [Select multiple model objects \(drop-down\)](#)
- [Text\\*](#)
- [Textarea\\*](#)
- [Time](#)
- [URL\\*](#)

## Content/presentation

Content plugins are presentational plugins, that make your forms look more complete and content rich.

- [Content image](#): Insert an image.
- [Content text](#): Add text.
- [Content video](#): Add an embed YouTube or Vimeo video.

## Security

- [CAPTCHA](#): Captcha integration, requires `django-simple-captcha` package.
- [ReCAPTCHA](#): Captcha integration, requires `django-recaptcha` package.
- [Honeypot](#): Anti-spam honeypot field.

## MPTT fields

- [Select MPTT model object \(drop-down\)](#)
- [Select multiple MPTT model objects \(drop-down\)](#)

## Test

Test plugins are made for dev purposes only.

- [Dummy](#): Solely for dev purposes.

## Bundled form handler plugins

Below a short overview of the form handler plugins. See the `README.rst` file in directory of each plugin for details.

- [DB store](#): Stores form data in a database.
- [HTTP repost](#): Repost the POST request to another endpoint.
- [Mail](#): Send the form data by email.

## Bundled themes

Below a short overview of the themes. See the README.rst file in directory of each theme for details.

- [Bootstrap 3](#): Bootstrap 3 theme.
- [Foundation 5](#): Foundation 5 theme.
- [Simple](#): Basic theme with form editing is in a style of Django admin.
- [DjangoCMS admin style](#): Basic theme with form editing is in a style of djangocms-admin-style.

---

## Third-party plugins and themes

---

List of remarkable third-party plugins:

- [fobi-phonenum](#) - A Fobi PhoneNumber form field plugin. Makes use of the *phonenum-ber\_field.formfields.PhoneNumberField* and *phonenum-ber\_field.widgets.PhoneNumberPrefixWidget*.

---

### HTML5 fields

---

The following HTML5 fields are supported in corresponding bundled plugins:

- date
- datetime
- email
- max
- min
- number
- url
- placeholder
- type

With the *fobi.contrib.plugins.form\_elements.fields.input* support for HTML5 fields is extended to the following fields:

- autocomplete
- autofocus
- list
- multiple
- pattern
- step

---

## Loading initial data using GET arguments

---

It's possible to provide initial data for the form using the GET arguments.

In that case, along with the field values, you should be providing an additional argument named “fobi\_initial\_data”, which doesn't have to hold a value. For example, if your form contains of fields named “email” and “age” and you want to provide initial values for those using GET arguments, you should be constructing your URL to the form as follows:

[http://127.0.0.1:8001/fobi/view/test-form/?fobi\\_initial\\_data&email=test@example.com&age=19](http://127.0.0.1:8001/fobi/view/test-form/?fobi_initial_data&email=test@example.com&age=19)

---

## Dynamic initial values

---

It's possible to provide a dynamic initial value for any of the text elements. In order to do that, you should use the build-in context processor or make your own one. The only requirement is that you should store all values that should be exposed in the form as a dict for *fobi\_dynamic\_values* dictionary key. Beware, that passing the original request object might be unsafe in many ways. Currently, a stripped down version of the request object is being passed as a context variable.

```
TEMPLATE_CONTEXT_PROCESSORS = (
    # ...
    "fobi.context_processors.dynamic_values",
    # ...
)
```

```
def dynamic_values(request):
    return {
        'fobi_dynamic_values': {
            'request': StrippedRequest(request),
            'now': datetime.datetime.now(),
            'today': datetime.date.today(),
        }
    }
```

In your GUI, you should be referring to the initial values in the following way:

```
{{ request.path }} {{ now }} {{ today }}
```

Note, that you should not provide the *fobi\_dynamic\_values*. as a prefix. Currently, the following variables are available in the *fobi.context\_processors.dynamic\_values* context processor:

- request: Stripped HttpRequest object.
  - request.path: A string representing the full path to the requested page, not including the scheme or domain.
  - request.get\_full\_path(): Returns the path, plus an appended query string, if applicable.
  - request.is\_secure(): Returns True if the request is secure; that is, if it was made with HTTPS.
  - request.is\_ajax(): Returns True if the request was made via an XMLHttpRequest, by checking the HTTP\_X\_REQUESTED\_WITH header for the string 'XMLHttpRequest'.
  - request.META: A stripped down standard Python dictionary containing the available HTTP headers.
    - \* HTTP\_ACCEPT\_ENCODING: Acceptable encodings for the response.
    - \* HTTP\_ACCEPT\_LANGUAGE: Acceptable languages for the response.
    - \* HTTP\_HOST: The HTTP Host header sent by the client.

- \* HTTP\_REFERER: The referring page, if any.
- \* HTTP\_USER\_AGENT: The client's user-agent string.
- \* QUERY\_STRING: The query string, as a single (unparsed) string.
- \* REMOTE\_ADDR: The IP address of the client.
- request.user: Authenticated user.
  - \* request.user.email:
  - \* request.user.get\_username(): Returns the username for the user. Since the User model can be swapped out, you should use this method instead of referencing the username attribute directly.
  - \* request.user.get\_full\_name(): Returns the first\_name plus the last\_name, with a space in between.
  - \* request.user.get\_short\_name(): Returns the first\_name.
  - \* request.user.is\_anonymous():
- now: datetime.datetime.now()
- today: datetime.date.today()

---

## Submitted form element plugins values

---

While some values of form element plugins are submitted as is, some others need additional processing. There are 3 types of behaviour taken into consideration:

- “val”: value is being sent as is.
- “repr”: (human readable) representation of the value is used.
- “mix”: mix of value as is and human readable representation.

The following plugins have been made configurable in such a way, that developers can choose the desired behaviour in projects’ settings:

- `FOBI_FORM_ELEMENT_CHECKBOX_SELECT_MULTIPLE_SUBMIT_VALUE_AS`
- `FOBI_FORM_ELEMENT_RADIO_SUBMIT_VALUE_AS`
- `FOBI_FORM_ELEMENT_SELECT_SUBMIT_VALUE_AS`
- `FOBI_FORM_ELEMENT_SELECT_MULTIPLE_SUBMIT_VALUE_AS`
- `FOBI_FORM_ELEMENT_SELECT_MODEL_OBJECT_SUBMIT_VALUE_AS`
- `FOBI_FORM_ELEMENT_SELECT_MULTIPLE_MODEL_OBJECTS_SUBMIT_VALUE_AS`

See the `README.rst` in each of the following plugins for more information.

- [Checkbox select multiple \(multiple checkboxes\)](#)
- [Radio select \(radio button\)](#)
- [Select \(drop-down\)](#)
- [Select model object \(drop-down\)](#)
- [Select MPTT model object \(drop-down\)](#)
- [Select multiple \(drop-down\)](#)
- [Select multiple model objects \(drop-down\)](#)
- [Select multiple MPTT model objects \(drop-down\)](#)

---

## Rendering forms using third-party libraries

---

You might want to render your forms using third-party libraries such as [django-crispy-forms](#), [django-floppyforms](#) or other alternatives.

For that purpose you should override the “snippets/form\_snippet.html” used by the theme you have chosen. Your template would then look similar to the one below (make sure to setup/configure your third-party form rendering library prior doing this).

### Using *django-crispy-forms*

```
{% load crispy_forms_tags fobi_tags %}

{% block form_non_field_and_hidden_errors %}
    {% get_form_hidden_fields_errors form as form_hidden_fields_errors %}
    {% if form.non_field_errors or form_hidden_fields_errors %}
        {% include fobi_theme.form_non_field_and_hidden_errors_snippet_template %}
    {% endif %}
{% endblock form_non_field_and_hidden_errors %}

{% crispy form %}
```

### Using *django-floppyforms*

```
{% load floppyforms fobi_tags %}

{% block form_non_field_and_hidden_errors %}
    {% get_form_hidden_fields_errors form as form_hidden_fields_errors %}
    {% if form.non_field_errors or form_hidden_fields_errors %}
        {% include fobi_theme.form_non_field_and_hidden_errors_snippet_template %}
    {% endif %}
{% endblock form_non_field_and_hidden_errors %}

{% form form %}
```

See how it's done in the [override simple theme](#) example.

---

## Import/export forms

---

There might be cases when you have *django-fobi* running on multiple instances and have already spend some time on making forms on one of the instances, and want to reuse those forms on another. You could of course re-create entire form in the GUI, but we can do better than that. It's possible to export forms into JSON format and import the exported forms again. It's preferable that you run both instances on the same versions of *django-fobi*, otherwise imports might break (although it might just work). There are two scenarios to deal with missing plugin errors, which you have don't yet have full control of. If both instances have the same set of form element and form handler plugins imports should go smoothly. It is though possible to make an import ignoring missing form element and form handler plugins. You would get an appropriate notice about that, but import will continue leaving the broken plugin data out.

---

## Available translations

---

English is the primary language.

- [Dutch](#) (core and plugins)
- [German](#) (core and plugins)
- [Russian](#) (core and plugins)

---

## Debugging

---

By default debugging is turned off. It means that broken form entries, which are entries with broken data, that are not possible to be shown, are just skipped. That's safe in production. Although, you for sure would want to see the broken entries in development. Set the `FOBI_DEBUG` to `True` in the `settings.py` of your project in order to do so.

Most of the errors are logged (DEBUG). If you have written a plugin and it somehow doesn't appear in the list of available plugins, do run the following management command since it not only syncs your plugins into the database, but also is a great way of checking for possible errors.

```
./manage.py fobi_sync_plugins
```

Run the following command in order to identify the broken plugins.

```
./manage.py fobi_find_broken_entries
```

If you have forms referring to form element- or form handler- plugins that are currently missing (not registered, removed, failed to load - thus there would be a risk that your form wouldn't be rendered properly/fully and the necessary data handling wouldn't happen either) you will get an appropriate exception. Although it's fine to get an instant error message about such failures in development, in production it wouldn't look appropriate. Thus, there are two settings related to the non-existing (not-found) form element- and form handler- plugins.

- `FOBI_DEBUG`: Set this to `True` in your development environment anyway. Watch error logs closely.
- `FOBI_FAIL_ON_MISSING_FORM_ELEMENT_PLUGINS`: If you want no error to be shown in case of missing form element plugins, set this to `False` in your settings module. Default value is `True`.
- `FOBI_FAIL_ON_MISSING_FORM_HANDLER_PLUGINS`: If you want no error to be shown in case of missing form element handlers, set this to `False` in your settings module. Default value is `True`.

---

## Troubleshooting

---

If you get a `FormElementPluginDoesNotExist` or a `FormHandlerPluginDoesNotExist` exception, make sure you have listed your plugin in the *settings* module of your project.

Contents:

### fobi package

#### Subpackages

##### fobi.contrib package

##### Subpackages

##### fobi.contrib.apps package

##### Subpackages

##### fobi.contrib.apps.djangocms\_integration package

##### Submodules

##### fobi.contrib.apps.djangocms\_integration.apps module

```
class fobi.contrib.apps.djangocms_integration.apps.Config(app_name, app_module)
    Bases: django.apps.config.AppConfig
    Config.
    label = 'fobi_contrib_apps.djangocms_integration'
    name = 'fobi.contrib.apps.djangocms_integration'
```

##### fobi.contrib.apps.djangocms\_integration.cms\_plugins module

#### fobi.contrib.apps.djangocms\_integration.conf module

`fobi.contrib.apps.djangocms_integration.conf.get_setting(setting, override=None)`

Get setting.

Get a setting from `fobi.contrib.apps.djangocms_integration.conf` module, falling back to the default.

If `override` is not `None`, it will be used instead of the setting.

##### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to `None`.

**Returns** Setting value.

#### fobi.contrib.apps.djangocms\_integration.defaults module

#### fobi.contrib.apps.djangocms\_integration.helpers module

`fobi.contrib.apps.djangocms_integration.helpers.get_form_template_choices()`

Get the form template choices.

It's possible to provide theme templates per theme or just per project.

##### Return list

`fobi.contrib.apps.djangocms_integration.helpers.get_success_page_template_choices()`

Get success page template choices.

##### Return list

#### fobi.contrib.apps.djangocms\_integration.models module

#### fobi.contrib.apps.djangocms\_integration.settings module

- `WIDGET_FORM_SENT` (str): Name of the GET param indicating that form has been successfully sent.

#### Module contents

#### fobi.contrib.apps.feincms\_integration package

#### Submodules

#### fobi.contrib.apps.feincms\_integration.apps module

`class fobi.contrib.apps.feincms_integration.apps.Config(app_name, app_module)`

Bases: `django.apps.config AppConfig`

Config.

`label = 'fobi_contrib_apps_feincms_integration'`

`name = 'fobi.contrib.apps.feincms_integration'`

#### fobi.contrib.apps.feincms\_integration.conf module

`fobi.contrib.apps.feincms_integration.conf.get_setting(setting, override=None)`

Get setting.

Get a setting from `fobi.contrib.apps.feincms_integration.conf` module, falling back to the default.

If override is not None, it will be used instead of the setting.

##### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to None.

**Returns** Setting value.

#### fobi.contrib.apps.feincms\_integration.defaults module

#### fobi.contrib.apps.feincms\_integration.helpers module

`fobi.contrib.apps.feincms_integration.helpers.get_form_template_choices()`

Gets the form template choices.

It's possible to provide theme templates per theme or just per project.

##### Return list

`fobi.contrib.apps.feincms_integration.helpers.get_success_page_template_choices()`

Get success page template choices.

##### Return list

#### fobi.contrib.apps.feincms\_integration.settings module

- **WIDGET\_FORM\_SENT\_GET\_PARAM** (str): Name of the GET param indicating that form has been successfully sent.

#### fobi.contrib.apps.feincms\_integration.widgets module

`class fobi.contrib.apps.feincms_integration.widgets.FobiFormWidget(*args, **kwargs)`  
 Bases: `django.db.models.base.Model`, `fobi.integration.processors.IntegrationProcessor`

Widget for to FeinCMS.

**Property** `fobi.models.FormEntry form_entry` Form entry to be rendered.

**Property** `str template` If given used for rendering the form.

##### class Meta

Meta class.

**abstract** = False

**app\_label** = 'fobi'

`FobiFormWidget.can_redirect` = True

`FobiFormWidget.finalize(request, response)`

Finalize.

`FobiFormWidget.form_entry`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`FobiFormWidget.form_entry_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.form_sent_get_param = 'sent'`

`FobiFormWidget.form_submit_button_text`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.form_template_name`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.form_title`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.get_form_template_name_display(*moreargs, **morekwargs)`

`FobiFormWidget.get_success_page_template_name_display(*moreargs, **morekwargs)`

`FobiFormWidget.hide_form_title`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.hide_success_page_title`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.process(request, **kwargs)`

This is where most of the form handling happens.

**Parameters** `request` (*django.http.HttpRequest*) –

**Return** `django.http.HttpResponse` | `str`

`FobiFormWidget.render(**kwargs)`

Render.

`FobiFormWidget.success_page_template_name`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.success_page_text`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FobiFormWidget.success_page_title`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**fobi.contrib.apps.mezzanine\_integration package**

### Submodules

**fobi.contrib.apps.mezzanine\_integration.admin module**

**fobi.contrib.apps.mezzanine\_integration.apps module**

**class** `fobi.contrib.apps.mezzanine_integration.apps.Config` (*app\_name, app\_module*)

Bases: `django.apps.config AppConfig`

`Config`.

**label** = 'fobi\_contrib\_apps\_mezzanine\_integration'

**name** = 'fobi.contrib.apps.mezzanine\_integration'

**fobi.contrib.apps.mezzanine\_integration.conf module**

`fobi.contrib.apps.mezzanine_integration.conf.get_setting` (*setting, override=None*)

Get setting.

Get a setting from `fobi.contrib.apps.mezzanine_integration.conf` module, falling back to the default.

If *override* is not `None`, it will be used instead of the setting.

#### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to `None`.

**Returns** Setting value.

**fobi.contrib.apps.mezzanine\_integration.defaults module**

**fobi.contrib.apps.mezzanine\_integration.helpers module**

`fobi.contrib.apps.mezzanine_integration.helpers.get_form_template_choices` ()

Gets the form template choices.

It's possible to provide theme templates per theme or just per project.

#### Return list

`fobi.contrib.apps.mezzanine_integration.helpers.get_success_page_template_choices` ()

Get success page template choices.

#### Return list

**fobi.contrib.apps.mezzanine\_integration.models module**

**fobi.contrib.apps.mezzanine\_integration.page\_processors module**

### fobi.contrib.apps.mezzanine\_integration.settings module

- `WIDGET_FORM_SENT_GET_PARAM` (str): Name of the GET param indicating that form has been successfully sent.

### Subpackages

### fobi.contrib.plugins.form\_elements.content.content\_image package

### Submodules

### fobi.contrib.plugins.form\_elements.content.content\_image.apps module

`class fobi.contrib.plugins.form_elements.content.content_image.apps.Config(app_name, app_module)`

Bases: `django.apps.config.AppConfig`

Config.

`label = 'fobi_contrib_plugins_form_elements_content_content_image'`

`name = 'fobi.contrib.plugins.form_elements.content.content_image'`

### fobi.contrib.plugins.form\_elements.content.content\_image.conf module

`fobi.contrib.plugins.form_elements.content.content_image.conf.get_setting(setting, override=None)`

Get setting.

Get a setting from `fobi.contrib.plugins.form_elements.content.content_image` conf module, falling back to the default.

If override is not None, it will be used instead of the setting.

### Parameters

- **setting** – String with setting name

- **override** – Value to use when no setting is available. Defaults to None.

**Returns** Setting value.

**fobi.contrib.plugins.form\_elements.content.content\_image.defaults module**

**fobi.contrib.plugins.form\_elements.content.content\_image.fobi\_form\_elements module**

**class** fobi.contrib.plugins.form\_elements.content.content\_image.fobi\_form\_elements.**ContentImageForm**

Bases: *fobi.base.FormElementPlugin*

Content image plugin.

**clone\_plugin\_data** (*entry*)

Clone plugin data.

Clone plugin data, which means we make a copy of the original image.

TODO: Perhaps rely more on data of form\_element\_entry?

**delete\_plugin\_data** ()

Delete uploaded file.

**form**

alias of ContentImageForm

**get\_form\_field\_instances** (*request=None*)

Get form field instances.

**group** = <django.utils.functional.\_\_proxy\_\_ object>

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**post\_processor** ()

Post process data.

Always the same.

**uid** = 'content\_image'

**fobi.contrib.plugins.form\_elements.content.content\_image.forms module**

**class** fobi.contrib.plugins.form\_elements.content.content\_image.forms.**ContentImageForm** (*data=None*, *files=None*, *auto\_id=1*, *pre=None*, *fix=None*, *initial=None*, *error\_class=None*, *django\_fobi\_label\_suffix=None*, *empty\_permitted=False*, *field\_order=None*, *use\_required\_attribute=True*)

Bases: django.forms.forms.Form, *fobi.base.BasePluginForm*

Form for ContentImagePlugin.

**base\_fields** = OrderedDict([('file', <django.forms.fields.ImageField object at 0x7f692f7d3e50>), ('alt', <django.forms.fields.CharField object at 0x7f692f7d3e50>)])

```

media
plugin_data_fields = [('file', ''), ('alt', ''), ('fit_method', 'center'), ('size', '500x500')]
save_plugin_data (request=None)
    Saving the plugin data and moving the file.

```

#### fobi.contrib.plugins.form\_elements.content.content\_image.helpers module

fobi.contrib.plugins.form\_elements.content.content\_image.helpers.**handle\_uploaded\_file** (image\_file)  
 Handle uploaded file.

**Parameters** **image\_file** (*django.core.files.uploadedfile.InMemoryUploadedFile*) –

**Return string** Path to the image (relative).

fobi.contrib.plugins.form\_elements.content.content\_image.helpers.**get\_crop\_filter** (fit\_method)  
 Get crop filter.

fobi.contrib.plugins.form\_elements.content.content\_image.helpers.**delete\_file** (image\_file)  
 Delete file from disc.

fobi.contrib.plugins.form\_elements.content.content\_image.helpers.**ensure\_unique\_filename** (destination)  
 Makes sure filenames are never overwritten.

**Parameters** **destination** (*string*) –

**Return string**

fobi.contrib.plugins.form\_elements.content.content\_image.helpers.**clone\_file** (source\_filename, rel-  
a-  
tive\_path=True)  
 Clone the file.

**Parameters** **source\_filename** (*string*) – Source filename.

**Return string** Filename of the cloned file.

#### fobi.contrib.plugins.form\_elements.content.content\_image.settings module

- FIT\_METHOD\_CROP\_SMART (*string*)
- FIT\_METHOD\_CROP\_CENTER (*string*)
- FIT\_METHOD\_CROP\_SCALE (*string*)
- FIT\_METHOD\_FIT\_WIDTH (*string*)
- FIT\_METHOD\_FIT\_HEIGHT (*string*)
- DEFAULT\_FIT\_METHOD (*string*)
- FIT\_METHODS\_CHOICES (*tuple*)
- FIT\_METHODS\_CHOICES\_WITH\_EMPTY\_OPTION (*list*)
- IMAGES\_UPLOAD\_DIR (*string*)

```

#### fobi.contrib.plugins.form\_elements.fields.file.conf module

```
fobi.contrib.plugins.form_elements.fields.file.conf.get_setting(setting, override=None)
```

Get setting.

Get a setting from `fobi.contrib.plugins.form_elements.fields.conf` module, falling back to the default.

If override is not None, it will be used instead of the setting.

#### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to None.

**Returns** Setting value.

### fobi.contrib.plugins.form\_elements.fields.file.defaults module

#### fobi.contrib.plugins.form\_elements.fields.file.fobi\_form\_elements module

**class** fobi.contrib.plugins.form\_elements.fields.file.fobi\_form\_elements.**FileInputPlugin** (*user=None*)

Bases: *fobi.base.FormFieldPlugin*

File field plugin.

#### **form**

alias of FileInputForm

**get\_form\_field\_instances** (*request=None*)

Get form field instances.

**group** = <django.utils.functional.\_\_proxy\_\_ object>

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**submit\_plugin\_form\_data** (*form\_entry, request, form*)

Submit plugin form data/process file upload.

Handling the posted data for file plugin when form is submitted. This method affects the original form and that's why it returns it.

#### Parameters

- **form\_entry** (*fobi.models.FormEntry*) – Instance of *fobi.models.FormEntry*.
- **request** (*django.http.HttpRequest*) –
- **form** (*django.forms.Form*) –

**uid** = 'file'

#### fobi.contrib.plugins.form\_elements.fields.file.forms module

**class** fobi.contrib.plugins.form\_elements.fields.file.forms.**FileInputForm** (*data=None, files=None, auto\_id=u'id\_%s', pre-fix=None, initial=None, error\_class=<class 'django.forms.utils.ErrorList', label\_suffix=None, empty\_permitted=False, field\_order=None, use\_required\_attribute=None*)

Bases: `django.forms.forms.Form`, `fobi.base.BaseFormFieldPluginForm`

Form for `FileInputPlugin`.

```
class fobi.contrib.plugins.form_handlers.db_store.apps.Config(app_name,
                                                             app_module)
    Bases: django.apps.config.AppConfig
    Config.

    label = 'fobi_contrib_plugins_form_handlers_db_store'

    name = 'fobi.contrib.plugins.form_handlers.db_store'
```

### fobi.contrib.plugins.form\_handlers.db\_store.conf module

`fobi.contrib.plugins.form_handlers.db_store.conf.get_setting(setting, override=None)`

Get setting.

Get a setting from `fobi.contrib.plugins.form_handlers.db_store` conf module, falling back to the default.

If override is not None, it will be used instead of the setting.

#### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to None.

**Returns** Setting value.

### fobi.contrib.plugins.form\_handlers.db\_store.defaults module

### fobi.contrib.plugins.form\_handlers.db\_store.fobi\_form\_handlers module

**class** `fobi.contrib.plugins.form_handlers.db_store.fobi_form_handlers.DBStoreHandlerPlugin` (*uses*

Bases: `fobi.base.FormHandlerPlugin`

DB store form handler plugin.

Can be used only once per form.

**allow\_multiple** = False

**custom\_actions** (*form\_entry, request=None*)

Custom actions.

Adding a link to view the saved form entries.

#### Return iterable

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**run** (*form\_entry, request, form, form\_element\_entries=None*)

Run.

#### Parameters

- **form\_entry** (`fobi.models.FormEntry`) – Instance of `fobi.models.FormEntry`.
- **request** (`django.http.HttpRequest`) –
- **form** (`django.forms.Form`) –
- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` objects.

**uid** = 'db\_store'

**class** `fobi.contrib.plugins.form_handlers.db_store.fobi_form_handlers.DBStoreWizardHandlerPlugin`

Bases: `fobi.base.FormWizardHandlerPlugin`

DB store form wizard handler plugin.

Can be used only once per form.

**allow\_multiple** = False

**custom\_actions** (*form\_wizard\_entry, request=None*)

Custom actions.

Adding a link to view the saved form entries.

**Return iterable**

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**run** (*form\_wizard\_entry, request, form\_list, form\_wizard, form\_element\_entries=None*)

Run.

**Parameters**

- **form\_wizard\_entry** (*fobi.models.FormWizardEntry*) – Instance of *fobi.models.FormWizardEntry*.
- **request** (*django.http.HttpRequest*) –
- **form\_list** (*list*) – List of *django.forms.Form* instances.
- **form\_wizard** (*fobi.wizard.views.dynamic.DynamicWizardView*) – Instance of *fobi.wizard.views.dynamic.DynamicWizardView*.
- **form\_element\_entries** (*iterable*) – Iterable of *fobi.models.FormElementEntry* objects.

**uid** = 'db\_store'

**fobi.contrib.plugins.form\_handlers.db\_store.helpers module**

**class** *fobi.contrib.plugins.form\_handlers.db\_store.helpers.DataExporter* (*queryset*)

Bases: object

Exporting the data.

**export\_to\_csv** ()

Export data to CSV.

**export\_to\_xls** ()

Export data to XLS.

**graceful\_export** ()

Export data into XLS/CSV depending on what is available.

**fobi.contrib.plugins.form\_handlers.db\_store.models module**

**class** *fobi.contrib.plugins.form\_handlers.db\_store.models.AbstractSavedFormDataEntry* (*\*args, \*\*kwargs*)

Bases: *django.db.models.base.Model*

Abstract saved form data entry.

**class** **Meta**

Meta class.

**abstract** = False

*AbstractSavedFormDataEntry*.**created**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

*AbstractSavedFormDataEntry*.**form\_data\_headers**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`AbstractSavedFormDataEntry.formatted_saved_data()`

Shows the formatted saved data records.

**Return string**

`AbstractSavedFormDataEntry.get_next_by_created(*moreargs, **morekwargs)`

`AbstractSavedFormDataEntry.get_previous_by_created(*moreargs, **morekwargs)`

`AbstractSavedFormDataEntry.saved_data`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`AbstractSavedFormDataEntry.user`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`AbstractSavedFormDataEntry.user_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`class fobi.contrib.plugins.form_handlers.db_store.models.SavedFormDataEntry(*args, **kwargs)`

Bases: `fobi.contrib.plugins.form_handlers.db_store.models.AbstractSavedFormDataEntry`

Saved form data.

**exception DoesNotExist**

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception SavedFormDataEntry.MultipleObjectsReturned**

Bases: `django.core.exceptions.MultipleObjectsReturned`

`SavedFormDataEntry.form_entry`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`SavedFormDataEntry.form_entry_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`SavedFormDataEntry.get_next_by_created(*moreargs, **morekwargs)`

`SavedFormDataEntry.get_previous_by_created(*moreargs, **morekwargs)`

`SavedFormDataEntry.id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`SavedFormDataEntry.objects = <django.db.models.manager.Manager object>`

`SavedFormDataEntry.user`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

**class** fobi.contrib.plugins.form\_handlers.db\_store.models.**SavedFormWizardDataEntry** (\*args, \*\*kwargs)  
 Bases: *fobi.contrib.plugins.form\_handlers.db\_store.models.AbstractSavedFormDataEntry*

Saved form data.

**exception DoesNotExist**

Bases: django.core.exceptions.ObjectDoesNotExist

**exception** SavedFormWizardDataEntry.**MultipleObjectsReturned**

Bases: django.core.exceptions.MultipleObjectsReturned

SavedFormWizardDataEntry.**form\_wizard\_entry**

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

SavedFormWizardDataEntry.**form\_wizard\_entry\_id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

SavedFormWizardDataEntry.**get\_next\_by\_created** (\*moreargs, \*\*morekwargs)

SavedFormWizardDataEntry.**get\_previous\_by\_created** (\*moreargs, \*\*morekwargs)

SavedFormWizardDataEntry.**id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

SavedFormWizardDataEntry.**objects** = <django.db.models.manager.Manager object>

SavedFormWizardDataEntry.**user**

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

**fobi.contrib.plugins.form\_handlers.db\_store.settings module**

- CSV\_DELIMITER (string)
- CSV\_QUOTECHAR (string)

## fobi.contrib.plugins.form\_handlers.db\_store.views module

fobi.contrib.plugins.form\_handlers.db\_store.views.**view\_saved\_form\_data\_entries**(*request*,  
*\*args*,  
*\*\*kwargs*)

View saved form data entries.

### Parameters

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) – Form ID.
- **theme** (*fobi.base.BaseTheme*) – Subclass of *fobi.base.BaseTheme*.
- **template\_name** (*string*) –

### Return *django.http.HttpResponse*

fobi.contrib.plugins.form\_handlers.db\_store.views.**export\_saved\_form\_data\_entries**(*request*,  
*\*args*,  
*\*\*kwargs*)

Export saved form data entries.

### Parameters

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) – Form ID.
- **theme** (*fobi.base.BaseTheme*) – Subclass of *fobi.base.BaseTheme*.

### Return *django.http.HttpResponse*

fobi.contrib.plugins.form\_handlers.db\_store.views.**view\_saved\_form\_wizard\_data\_entries**(*request*,  
*\*args*,  
*\*\*kwargs*)

View saved form wizard data entries.

### Parameters

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_entry\_id** (*int*) – Form ID.
- **theme** (*fobi.base.BaseTheme*) – Subclass of *fobi.base.BaseTheme*.
- **template\_name** (*string*) –

### Return *django.http.HttpResponse*

fobi.contrib.plugins.form\_handlers.db\_store.views.**export\_saved\_form\_wizard\_data\_entries**(*request*,  
*\*args*,  
*\*\*kwargs*)

Export saved form wizard data entries.

### Parameters

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_entry\_id** (*int*) – Form ID.
- **theme** (*fobi.base.BaseTheme*) – Subclass of *fobi.base.BaseTheme*.

### Return *django.http.HttpResponse*

**fobi.contrib.plugins.form\_handlers.db\_store.widgets module**

**class** `fobi.contrib.plugins.form_handlers.db_store.widgets.BaseDbStorePluginWidget` (*plugin*)  
 Bases: `fobi.base.FormHandlerPluginWidget`

Base dummy form element plugin widget.

**export\_entries\_icon\_class** = 'glyphicon glyphicon-export'

**plugin\_uid** = 'db\_store'

**view\_entries\_icon\_class** = 'glyphicon glyphicon-list'

**view\_saved\_form\_data\_entries\_template\_name** = 'db\_store/view\_saved\_form\_data\_entries.html'

**Module contents****fobi.contrib.plugins.form\_handlers.http\_repost package****Submodules****fobi.contrib.plugins.form\_handlers.http\_repost.apps module**

**class** `fobi.contrib.plugins.form_handlers.http_repost.apps.Config` (*app\_name*,  
*app\_module*)

Bases: `django.apps.config AppConfig`

Config.

**label** = 'fobi\_contrib\_plugins\_form\_handlers\_http\_repost'

**name** = 'fobi.contrib.plugins.form\_handlers.http\_repost'

**fobi.contrib.plugins.form\_handlers.http\_repost.fobi\_form\_handlers module**

**class** `fobi.contrib.plugins.form_handlers.http_repost.fobi_form_handlers.HTTPRepostHandlerPlugin`  
 Bases: `fobi.base.FormHandlerPlugin`

HTTP repost handler plugin.

Makes a HTTP repost to a given endpoint. Should be executed before `db_store` plugin.

**form**

alias of `HTTPRepostForm`

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**plugin\_data\_repr** ()

Human readable representation of plugin data.

**Return string**

**run** (*form\_entry*, *request*, *form*, *form\_element\_entries*=None)  
 Run.

**Parameters**

- **form\_entry** (`fobi.models.FormEntry`) – Instance of `fobi.models.FormEntry`.
- **request** (`django.http.HttpRequest`) –
- **form** (`django.forms.Form`) –

- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` objects.

**uid** = 'http\_repost'

**class** `fobi.contrib.plugins.form_handlers.http_repost.fobi_form_handlers.HTTPRepostWizardHandler`

Bases: `fobi.base.FormWizardHandlerPlugin`

HTTP repost wizard handler plugin.

Makes a HTTP repost to a given endpoint. Should be executed before `db_store` plugin.

**form**

alias of `HTTPRepostForm`

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**plugin\_data\_repr**()

Human readable representation of plugin data.

**Return string**

**run** (*form\_wizard\_entry, request, form\_list, form\_wizard, form\_element\_entries=None*)

Run.

**Parameters**

- **form\_wizard\_entry** (`fobi.models.FormWizardEntry`) – Instance of `fobi.models.FormWizardEntry`.
- **request** (`django.http.HttpRequest`) –
- **form\_list** (*list*) – List of `django.forms.Form` instances.
- **form\_wizard** (`fobi.wizard.views.dynamic.DynamicWizardView`) – Instance of `fobi.wizard.views.dynamic.DynamicWizardView`.
- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` objects.

**uid** = 'http\_repost'

**fobi.contrib.plugins.form\_handlers.http\_repost.forms module**

**class** `fobi.contrib.plugins.form_handlers.http_repost.forms.HTTPRepostForm` (*data=None, files=None, auto\_id=u'id\_%s', pre-fix=None, initial=None, error\_class=<class 'django.forms.utils.ErrorList', label\_suffix=None, empty\_permitted=False, field\_order=None, use\_required\_attribute=Non*)

Bases: `django.forms.forms.Form`, `fobi.base.BasePluginForm`

Form for `HTTPRepostPlugin`.

**base\_fields** = `OrderedDict([('endpoint_url', <django.forms.fields.URLField object at 0x7f692f7d3950>))]`

```

declared_fields = OrderedDict([('endpoint_url', <django.forms.fields.URLField object at 0x7f692f7d3950>)])
media
plugin_data_fields = [('endpoint_url', '')]

```

## Module contents

### fobi.contrib.plugins.form\_handlers.mail package

#### Submodules

##### fobi.contrib.plugins.form\_handlers.mail.apps module

```

class fobi.contrib.plugins.form_handlers.mail.apps.Config(app_name, app_module)
    Bases: django.apps.config AppConfig
    Config.

                                                                    er-
                                                                    ror_messages=None,
                                                                    show_hidden_initial=False,
                                                                    valida-
                                                                    tors=[],
                                                                    local-
                                                                    ize=False,
                                                                    dis-
                                                                    abled=False,
                                                                    la-
                                                                    bel_suffix=None)
```

Bases: `django.forms.fields.Field`

MultiEmailField.

**code** = 'invalid'

**message** = <django.utils.functional.\_\_proxy\_\_ object>

**to\_python** (*value*)  
 Normalize data to a list of strings.

**validate** (*value*)  
 Check if value consists only of valid emails.

**widget**  
 alias of MultiEmailWidget

#### fobi.contrib.plugins.form\_handlers.mail.fobi\_form\_handlers module

```
class fobi.contrib.plugins.form_handlers.mail.fobi_form_handlers.MailHandlerPlugin (user=None)
    Bases: fobi.base.FormHandlerPlugin
```

Mail handler plugin.

Sends emails to the person specified. Should be executed before `db_store` and `http_repost` plugins.

**form**  
 alias of MailForm

**name** = <django.utils.functional.\_\_proxy\_\_ object>

**plugin\_data\_repr** ()  
 Human readable representation of plugin data.

**Return string**

**run** (*form\_entry*, *request*, *form*, *form\_element\_entries*=None)  
 Run.

**Parameters**

- **form\_entry** (*fobi.models.FormEntry*) – Instance of `fobi.models.FormEntry`.

- **request** (*django.http.HttpRequest*) –
- **form** (*django.forms.Form*) –
- **form\_element\_entries** (*iterable*) – Iterable of *fobi.models.FormElementEntry* objects.

**uid** = 'mail'

**class** *fobi.contrib.plugins.form\_handlers.mail.fobi\_form\_handlers.MailWizardHandlerPlugin* (*user=*  
Bases: *fobi.base.FormWizardHandlerPlugin*

Mail wizard handler plugin.

Sends emails to the person specified. Should be executed before *db\_store* and *http\_repost* plugins.

**form**  
alias of *MailForm*

**name** = <*django.utils.functional.\_\_proxy\_\_* object>

**plugin\_data\_repr**()  
Human readable representation of plugin data.

**Return string**

**run** (*form\_wizard\_entry, request, form\_list, form\_wizard, form\_element\_entries=None*)  
Run.

**Parameters**

- **form\_wizard\_entry** (*fobi.models.FormWizardEntry*) – Instance of *fobi.models.FormWizardEntry*.
- **request** (*django.http.HttpRequest*) –
- **form\_list** (*list*) – List of *django.forms.Form* instances.
- **form\_wizard** (*fobi.wizard.views.dynamic.DynamicWizardView*) – Instance of *fobi.wizard.views.dynamic.DynamicWizardView*.
- **form\_element\_entries** (*iterable*) – Iterable of *fobi.models.FormElementEntry* objects.

**uid** = 'mail'

**fobi.contrib.plugins.form\_handlers.mail.forms module**

**class** *fobi.contrib.plugins.form\_handlers.mail.forms.MailForm* (*data=None,*  
*files=None,*  
*auto\_id=u'id\_%s',*  
*prefix=None, initial=None, error\_class=<class*  
*'django.forms.utils.ErrorList'>, label\_suffix=None,*  
*empty\_permitted=False,*  
*field\_order=None,*  
*use\_required\_attribute=None*)

Bases: *django.forms.forms.Form*, *fobi.base.BasePluginForm*

Form for *BooleanSelectPlugin*.

**base\_fields** = *OrderedDict*([('from\_name', <*django.forms.fields.CharField* object at 0x7f692f7d3450>), ('from\_email',

```

declared_fields = OrderedDict([('from_name', <django.forms.fields.CharField object at 0x7f692f7d3450>), ('from_email',
media
plugin_data_fields = [('from_name', ''), ('from_email', ''), ('to_name', ''), ('to_email', ''), ('subject', ''), ('body', ''), ('cc', '')])

```

#### fobi.contrib.plugins.form\_handlers.mail.helpers module

```

fobi.contrib.plugins.form_handlers.mail.helpers.send_mail(subject, message, from_email, recipient_list, fail_silently=False, auth_user=None, auth_password=None, connection=None, html_message=None, attachments=None)

```

Send email.

Easy wrapper for sending a single message to a recipient list. All members of the recipient list will see the other recipients in the 'To' field.

If `auth_user` is `None`, the `EMAIL_HOST_USER` setting is used. If `auth_password` is `None`, the `EMAIL_HOST_PASSWORD` setting is used.

Note: The API for this method is frozen. New code wanting to extend the functionality should use the `EmailMessage` class directly.

#### fobi.contrib.plugins.form\_handlers.mail.settings module

#### fobi.contrib.plugins.form\_handlers.mail.widgets module

```

class fobi.contrib.plugins.form_handlers.mail.widgets.MultiEmailWidget(attrs=None)
    Bases: django.forms.widgets.Textarea
    Multi email widget.
    is_hidden = False
    media
    prep_value(value)
        Prepare value before effectively render widget
    render(name, value, attrs=None)
        Render.

```

**position\_prop\_name** = 'order'

**templates** = ['mailchimp\_importer/0.html', 'mailchimp\_importer/1.html']

**uid** = 'mailchimp'

**wizard**

alias of MailchimpImporterWizardView

### fobi.contrib.plugins.form\_importers.mailchimp\_importer.forms module

**class** fobi.contrib.plugins.form\_importers.mailchimp\_importer.forms.**MailchimpAPIKeyForm** (*data=None*, *files=None*, *auto\_id=True*, *pre=False*, *fix=None*, *initial=None*, *error\_class=django.forms.models.ModelFormErrorClass*, *label\_suffix=None*, *empty\_permitted=False*, *field\_order=None*, *use\_required\_attribute=True*)

*files=None*  
*auto\_id=True*  
*pre=False*  
*fix=None*  
*initial=None*  
*error\_class=django.forms.models.ModelFormErrorClass*  
*label\_suffix=None*  
*empty\_permitted=False*  
*field\_order=None*  
*use\_required\_attribute=True*

Bases: `django.forms.forms.Form`

MailchimpAPIKeyForm.

First form the the wizard. Here users are supposed to provide the API key of their Mailchimp account.

**base\_fields** = `OrderedDict([('api_key', <django.forms.fields.CharField object at 0x7f692f7bdd90>)])`

**declared\_fields** = `OrderedDict([('api_key', <django.forms.fields.CharField object at 0x7f692f7bdd90>)])`

**media**

**class** `fobi.contrib.plugins.form_importers.mailchimp_importer.forms.MailchimpListIDForm(*args, **kwargs)`

Bases: `django.forms.forms.Form`

MailchimpListIDForm.

Second form of the wizard. Here users are supposed to choose the form they want to import.

**base\_fields** = `OrderedDict([('list_id', <django.forms.fields.ChoiceField object at 0x7f692f804a50>)])`

**declared\_fields** = `OrderedDict([('list_id', <django.forms.fields.ChoiceField object at 0x7f692f804a50>)])`

**media**

**fobi.contrib.plugins.form\_importers.mailchimp\_importer.views module**

**class** `fobi.contrib.plugins.form_importers.mailchimp_importer.views.MailchimpImporterWizardView`

Bases: `fobi.wizard.views.views.SessionWizardView`

MailchimpImporterWizardView.

**done** (*form\_list*, *\*\*kwargs*)

**form\_list** = [`<class 'fobi.contrib.plugins.form_importers.mailchimp_importer.forms.MailchimpAPIKeyForm'>`, `<class`

**get\_form\_kwargs** (*step*)

Get form kwargs.

Module contents

Module contents

Module contents

fobi.integration package

Submodules

fobi.integration.helpers module

`fobi.integration.helpers.get_template_choices` (*source*, *choices*,  
*theme\_specific\_choices\_key*)

Get the template choices.

It's possible to provide theme templates per theme or just per project.

#### Parameters

- **source** (*str*) – Example value 'feincms\_integration'.
- **or list choices** (*tuple*) –
- **theme\_specific\_choices\_key** (*str*) –

Return list

fobi.integration.processors module

**class** `fobi.integration.processors.IntegrationProcessor`

Bases: `object`

Generic integration processor.

#### Parameters

- **form\_sent\_get\_param** (*str*) –

- **can\_redirect** (*bool*) – If set to True, if not authenticated an attempt to redirect user to a login page would be made. Otherwise, a message about authentication would be generated instead (in place of the form). Some content management systems, like Django-CMS, aren't able to redirect on plugin level. For those systems, the value of `can_redirect` should be set to False.
- **login\_required\_template\_name** (*str*) – Template to be used for rendering the login required message. This is only important when `login_required_redirect` is set to False.

**can\_redirect** = True

**form\_sent\_get\_param** = 'sent'

**integration\_check** (*instance*)

Integration check.

Performs a simple check to identify whether the model instance has been implemented according to the expectations.

**login\_required\_template\_name** = None

## Module contents

### fobi.management package

#### Subpackages

#### fobi.management.commands package

#### Submodules

#### fobi.management.commands.fobi\_find\_broken\_entries module

**class** `fobi.management.commands.fobi_find_broken_entries.Command` (*stdout=None, stderr=None, no\_color=False*)

Bases: `django.core.management.base.BaseCommand`

Find the broken plugin records in the database:

- `fobi.models.FormElementEntry`
- `fobi.models.FormHandlerEntry`

**handle** (*\*args, \*\*options*)  
Handle.

#### fobi.management.commands.fobi\_migrate\_03\_to\_04 module

**class** `fobi.management.commands.fobi_migrate_03_to_04.Command` (*stdout=None, stderr=None, no\_color=False*)

Bases: `django.core.management.base.BaseCommand`

Database related changes necessary to upgrade fobi==0.3.\* to fobi==0.4.

The full list of changes is listed below:

- Change the “birthday” occurrences to “date\_drop\_down”.

```

handle (*args, **options)
    Handle.

```

#### fobi.management.commands.fobi\_sync\_plugins module

```

class fobi.management.commands.fobi_sync_plugins.Command (stdout=None, stderr=None,
                                                         no_color=False)

```

Bases: django.core.management.base.BaseCommand

Adds the missing plugins to database.

This command shall be ran every time a developer adds a new plugin. The following plugins are affected:

- fobi.models.FormElementPlugin
- fobi.models.FormHandlerPlugin

```

handle (*args, **options)
    Handle.

```

#### fobi.management.commands.fobi\_update\_plugin\_data module

```

class fobi.management.commands.fobi_update_plugin_data.Command (stdout=None,
                                                                stderr=None,
                                                                no_color=False)

```

Bases: django.core.management.base.BaseCommand

Updates the plugin data for all entries of all users.

Rules for update are specified in the plugin itself.

This command shall be ran if significant changes have been made to the system for which the data shall be updated.

```

handle (*args, **options)
    Handle.

```

### Module contents

#### fobi.templatetags package

##### Submodules

#### fobi.templatetags.fobi\_tags module

```
fobi.templatetags.fobi_tags.get_fobi_plugin(parser, token)
```

Get the plugin.

Note, that entry shall be a instance of `fobi.models.FormElementEntry` or `fobi.models.FormHandlerEntry`.

**Syntax** { % get\_fobi\_plugin entry as [context\_var\_name] % }

**Example** {% get\_fobi\_plugin entry as plugin %}

```
{% get_fobi_plugin entry as plugin %} {{ plugin.render }}
```

```
fobi.templatetags.fobi_tags.get_fobi_form_handler_plugin_custom_actions (parser,
                                                                    to-
                                                                    ken)
```

Get the form handler plugin custom actions.

Note, that plugin shall be a instance of `fobi.models.FormHandlerEntry`.

#### Syntax

```
{% get_fobi_form_handler_plugin_custom_actions [plugin] [form_entry] as [con-
text_var_name] %}
```

#### Example

```
{% get_fobi_form_handler_plugin_custom_actions plugin form_entry as
form_handler_plugin_custom_actions %}
```

```
fobi.templatetags.fobi_tags.get_fobi_form_wizard_handler_plugin_custom_actions (parser,
                                                                    to-
                                                                    ken)
```

Get the form wizard handler plugin custom actions.

Note, that plugin shall be a instance of `fobi.models.FormWizardHandlerEntry`.

#### Syntax

```
{% get_fobi_form_wizard_handler_plugin_custom_actions [plugin] [form_wizard_entry]
as [context_var_name] %}
```

#### Example

```
{% get_fobi_form_wizard_handler_plugin_custom_actions
plugin form_wizard_entry as form_wizard_handler_plugin_custom_actions %}
```

```
fobi.templatetags.fobi_tags.get_form_field_type (parser, token)
```

Get form field type.

Syntax:

```
{% get_form_field_type [field] as [context_var_name] %}
```

Example:

```
{% get_form_field_type form.field as form_field_type %}
{% if form_field_type.is_checkbox %}
...
{% endif %}
```

```
fobi.templatetags.fobi_tags.get_form_hidden_fields_errors (parser, token)
```

Get form hidden fields errors.

**Syntax** {% get\_form\_hidden\_fields\_errors [form] as [context\_var\_name] %}

**Example** {% get\_form\_hidden\_fields\_errors form as form\_hidden\_fields\_errors %} {{  
form\_hidden\_fields\_errors.as\_ul }}

```
fobi.templatetags.fobi_tags.has_edit_form_entry_permissions (parser, token)
```

Checks the permissions

**Syntax** {% has\_edit\_form\_entry\_permissions as [var\_name] %}

**Example** `{% has_edit_form_entry_permissions %}`

or

`{% has_edit_form_entry_permissions as has_permissions %}`

`fobi.templatetags.fobi_tags.render_auth_link(context)`

Render auth link.

`fobi.templatetags.fobi_tags.render_fobi_forms_list(context, queryset, *args, **kwargs)`

Render the list of fobi forms.

**Syntax** `{% render_fobi_forms_list [queryset] [show_edit_link] [show_delete_link] [show_export_link] %}`

**Example** `{% render_fobi_forms_list queryset show_edit_link=True show_delete_link=False show_export_link=False %}`

## fobi.templatetags.future\_compat module

`fobi.templatetags.future_compat.firstof(parser, token, escape=False)`

Outputs the first variable passed that is not False.

Outputs the first variable passed that is not False, without escaping.

Outputs nothing if all the passed variables are False.

Sample usage:

```
{% firstof var1 var2 var3 %}
```

This is equivalent to:

```
{% if var1 %}
  {{ var1|safe }}
{% elif var2 %}
  {{ var2|safe }}
{% elif var3 %}
  {{ var3|safe }}
{% endif %}
```

but obviously much cleaner!

You can also use a literal string as a fallback value in case all passed variables are False:

```
{% firstof var1 var2 var3 "fallback value" %}
```

If you want to escape the output, use a filter tag:

```
{% filter force_escape %}
  {% firstof var1 var2 var3 "fallback value" %}
{% endfilter %}
```

## Module contents

### fobi.tests package

### Submodules

## fobi.tests.base module

`fobi.tests.base.print_info(func)`  
Prints some useful info.

`fobi.tests.base.skip(func)`  
Simply skips the test.

`fobi.tests.base.is_fobi_setup_completed()`  
Is fobi setup completed?

`fobi.tests.base.mark_fobi_setup_as_completed()`  
Mark fobi setup as completed.

## fobi.tests.constants module

## fobi.tests.data module

## fobi.tests.helpers module

`fobi.tests.helpers.get_or_create_admin_user()`  
Create a user for testing the fobi.

TODO: At the moment an admin account is being tested. Automated tests with diverse accounts are to be implemented.

`fobi.tests.helpers.get_or_create_admin_user()`  
Create a user for testing the fobi.

TODO: At the moment an admin account is being tested. Automated tests with diverse accounts are to be implemented.

`fobi.tests.helpers.create_form_with_entries(user=None, create_entries_if_form_exist=True)`  
Create test form with entries.  
Fills the form with pre-defined plugins.

**Parameters**

- **user** (*django.contrib.auth.models.User*) –
- **create\_entries\_if\_form\_exist** (*bool*) – If set to True, entries are being created even if form already exists (a database record).

**Return** `fobi.models.FormEntry` Instance of `fobi.models.FormEntry` with a number of form elements and handlers filled in.

`fobi.tests.helpers.db_clean_up()`  
Clean up the database.  
Clean up the database by removing all form element and form handler entries.

## fobi.tests.test\_browser\_build\_dynamic\_forms module

**class** `fobi.tests.test_browser_build_dynamic_forms.BaseFobiBrowserBuldDynamicFormsTest` (*methodNa*)  
Bases: `django.test.testcases.LiveServerTestCase`  
Browser tests django-fobi bulding forms functionality.

Backed up by selenium. This test is based on the bootstrap3 theme.

```
LIVE_SERVER_URL = None
```

```
cleans_up_after_itself = True
```

```
e = AttributeError(“‘Settings’ object has no attribute ‘LIVE_SERVER_URL’”,)
```

```
classmethod setUpClass ()
```

```
    Set up class.
```

```

[fobi.wizard.views.dynamic module](#)

**class** `fobi.wizard.views.dynamic.DynamicWizardView` (*\*\*kwargs*)

Bases: `django.views.generic.base.TemplateView`

The WizardView is used to create multi-page forms.

Handles all the storage and validation stuff. The wizard is based on Django's generic class based views.

**classmethod** `as_view` (*\*args, \*\*kwargs*)

As view.

This method is used within `urls.py` to create unique wizardview instances for every request. We need to override this method because we add some kwargs which are needed to make the wizardview usable.

**compute\_form\_list** (*form\_list=None, \*args, \*\*kwargs*)

Compute the forms list.

**condition\_dict** = `None`

**dispatch** (*request, \*args, \*\*kwargs*)

Dispatch.

This method gets called by the routing engine. The first argument is *request* which contains a *HttpRequest* instance. The request is stored in *self.request* for later use. The storage instance is stored in *self.storage*.

After processing the request using the *dispatch* method, the response gets updated by the storage engine (for example add cookies).

**done** (*form\_list, \*\*kwargs*)

Done.

This method must be overridden by a subclass to process the form data after processing all steps.

**get** (*request, \*args, \*\*kwargs*)

GET requests.

This method handles GET requests.

If a GET request reaches this point, the wizard assumes that the user just starts at the first step or wants to restart the process. The data of the wizard will be resetted before rendering the first step

**get\_all\_cleaned\_data** ()

Get all cleaned data.

Returns a merged dictionary of all step `cleaned_data` dictionaries. If a step contains a *FormSet*, the key will be prefixed with 'formset-' and contain a list of the formset `cleaned_data` dictionaries.

**get\_cleaned\_data\_for\_step** (*step*)

Get clean data for step.

Returns the cleaned data for a given *step*. Before returning the cleaned data, the stored values are revalidated through the form. If the data doesn't validate, `None` will be returned.

**get\_context\_data** (*form*, *\*\*kwargs*)

Get context data.

Returns the template context for a step. You can overwrite this method to add more data for all or some steps. This method returns a dictionary containing the rendered form step. Available template context variables are:

- all extra data stored in the storage backend
- wizard* - a dictionary representation of the wizard instance

Example:

```
class MyWizard(WizardView):
    def get_context_data(self, form, **kwargs):
        context = super(MyWizard, self).get_context_data(form=form,
                                                         **kwargs)

        if self.steps.current == 'my_step_name':
            context.update({'another_var': True})
        return context
```

**get\_form** (*step=None*, *data=None*, *files=None*)

Get the form.

Constructs the form for a given *step*. If no *step* is defined, the current step will be determined automatically.

The form will be initialized using the *data* argument to prefill the new form. If needed, instance or queryset (for *ModelForm* or *ModelFormSet*) will be added too.

**get\_form\_initial** (*step*)

Get form initial

Returns a dictionary which will be passed to the form for *step* as *initial*. If no initial data was provided while initializing the form wizard, an empty dictionary will be returned.

**get\_form\_instance** (*step*)

Get form instance.

Returns an object which will be passed to the form for *step* as *instance*. If no instance object was provided while initializing the form wizard, `None` will be returned.

**get\_form\_kwargs** (*step=None*)

Get form kwargs.

Returns the keyword arguments for instantiating the form (or formset) on the given step.

**get\_form\_list** ()

Get form list.

This method returns a `form_list` based on the initial form list but checks if there is a condition method/value in the `condition_list`. If an entry exists in the condition list, it will call/read the value and respect the result. (True means add the form, False means ignore the form)

The `form_list` is always generated on the fly because condition methods could use data from other (maybe previous forms).

**get\_form\_prefix** (*step=None, form=None*)

Get form prefix.

Returns the prefix which will be used when calling the actual form for the given step. *step* contains the step-name, *form* the form which will be called with the returned prefix.

If no step is given, the *form\_prefix* will determine the current step automatically.

**get\_form\_step\_data** (*form*)

Get form step data.

Is used to return the raw form data. You may use this method to manipulate the data.

**get\_form\_step\_files** (*form*)

Get form step files.

Is used to return the raw form files. You may use this method to manipulate the data.

**get\_initial\_wizard\_data** (*\*args, \*\*kwargs*)

This should be implemented in your subclass.

You are supposed to return a dict with the dynamic properties, such as *form\_list* or *template\_name*.

**classmethod get\_initkwargs** (*form\_list=None, initial\_dict=None, instance\_dict=None, condition\_dict=None, \*args, \*\*kwargs*)

Create a dict with all needed parameters.

For the form wizard instances.

- *form\_list* - is a list of forms. The list entries can be single form classes or tuples of (*step\_name, form\_class*). If you pass a list of forms, the wizardview will convert the class list to (*zero\_based\_counter, form\_class*). This is needed to access the form for a specific step.
- *initial\_dict* - contains a dictionary of initial data dictionaries. The key should be equal to the *step\_name* in the *form\_list* (or the str of the zero based counter - if no *step\_names* added in the *form\_list*)
- *instance\_dict* - contains a dictionary whose values are model instances if the step is based on a `ModelForm` and `querysets` if the step is based on a `ModelFormSet`. The key should be equal to the *step\_name* in the *form\_list*. Same rules as for *initial\_dict* apply.
- *condition\_dict* - contains a dictionary of boolean values or callables. If the value of for a specific *step\_name* is callable it will be called with the wizardview instance as the only argument. If the return value is true, the step's form will be used.

**get\_next\_step** (*step=None*)

Get next step.

Returns the next step after the given *step*. If no more steps are available, `None` will be returned. If the *step* argument is `None`, the current step will be determined automatically.

**get\_prefix** (*request, \*args, \*\*kwargs*)

Get prefix.

**get\_prev\_step** (*step=None*)

Get previous step.

Returns the previous step before the given *step*. If there are no steps available, `None` will be returned. If the *step* argument is `None`, the current step will be determined automatically.

**get\_step\_index** (*step=None*)

Get step index.

Returns the index for the given *step* name. If no step is given, the current step will be used to get the index.

```

initial_dict = None

instance_dict = None

post (*args, **kwargs)
    POST requests.

    This method handles POST requests.

    The wizard will render either the current step (if form validation wasn't successful), the next step (if the
    current step was stored successful) or the done view (if no more steps are available)

process_step (form)
    Process the step.

    This method is used to post-process the form data. By default, it returns the raw form.data dictionary.

process_step_files (form)
    Process step files.

    This method is used to post-process the form files. By default, it returns the raw form.files dictionary.

render (form=None, **kwargs)
    Render.

    Returns a HttpResponse containing all needed context data.

render_done (form, **kwargs)
    Render done.

    This method gets called when all forms passed. The method should also re-validate all steps to prevent
    manipulation. If any form fails to validate, render_revalidation_failure should get called. If everything is
    fine call done.

render_goto_step (goto_step, **kwargs)
    Render goto step.

    This method gets called when the current step has to be changed. goto_step contains the requested step to
    go to.

render_next_step (form, **kwargs)
    Render next step.

    This method gets called when the next step/form should be rendered. form contains the last/current form.

render_revalidation_failure (step, form, **kwargs)
    Render revalidation failure.

    Gets called when a form doesn't validate when rendering the done view. By default, it changes the current
    step to failing forms step and renders the form.

storage_name = None

template_name = 'formtools/wizard/wizard_form.html'
class fobi.wizard.views.dynamic.DynamicSessionWizardView (**kwargs)
    Bases: fobi.wizard.views.dynamic.DynamicWizardView

    A WizardView with pre-configured SessionStorage backend.

    storage_name = 'formtools.wizard.storage.session.SessionStorage'

class fobi.wizard.views.dynamic.DynamicCookieWizardView (**kwargs)
    Bases: fobi.wizard.views.dynamic.DynamicWizardView

    A WizardView with pre-configured CookieStorage backend.

```

```
storage_name = 'formtools.wizard.storage.cookie.CookieStorage'
```

**class** `fobi.wizard.views.dynamic.DynamicNamedUrlWizardView` (*\*\*kwargs*)  
Bases: `fobi.wizard.views.dynamic.DynamicWizardView`

A WizardView with URL named steps support.

**done\_step\_name** = None

**get** (*\*args, \*\*kwargs*)  
GET request.

This renders the form or, if needed, does the http redirects.

**get\_context\_data** (*form, \*\*kwargs*)  
Get context data.

NamedUrlWizardView provides the `url_name` of this wizard in the context dict *wizard*.

**classmethod** **get\_initkwargs** (*\*args, \*\*kwargs*)  
Get init kwargs.

We require a `url_name` to reverse URLs later. Additionally users can pass a `done_step_name` to change the URL name of the “done” view.

**get\_step\_url** (*step*)  
Get step URL.

**post** (*\*args, \*\*kwargs*)  
POST request.

Do a redirect if user presses the prev. step button. The rest of this is super’d from WizardView.

**render\_done** (*form, \*\*kwargs*)  
Render done.

When rendering the done view, we have to redirect first (if the URL name doesn’t fit).

**render\_goto\_step** (*goto\_step, \*\*kwargs*)  
Render goto step.

This method gets called when the current step has to be changed. *goto\_step* contains the requested step to go to.

**render\_next\_step** (*form, \*\*kwargs*)  
Render next step.

When using the NamedUrlWizardView, we have to redirect to update the browser’s URL to match the shown step.

**render\_revalidation\_failure** (*failed\_step, form, \*\*kwargs*)  
Render revalidation failure.

When a step fails, we have to redirect the user to the first failing step.

**url\_name** = None

**class** `fobi.wizard.views.dynamic.DynamicNamedUrlSessionWizardView` (*\*\*kwargs*)  
Bases: `fobi.wizard.views.dynamic.DynamicNamedUrlWizardView`

A NamedUrlWizardView with pre-configured SessionStorage backend.

**storage\_name** = 'formtools.wizard.storage.session.SessionStorage'

```
class fobi.wizard.views.dynamic.DynamicNamedUrlCookieWizardView (**kwargs)
    Bases: fobi.wizard.views.dynamic.DynamicNamedUrlWizardView
```

A NamedUrlFormWizard with pre-configured CookieStorageBackend.

```
storage_name = 'formtools.wizard.storage.cookie.CookieStorage'
```

#### fobi.wizard.views.views module

```
class fobi.wizard.views.views.WizardView (**kwargs)
    Bases: formtools.wizard.views.WizardView, fobi.wizard.views.views.PatchGetMixin
```

Patched version of the original WizardView.

```
get (request, *args, **kwargs)
    GET requests.
```

This method handles GET requests.

If a GET request reaches this point, the wizard assumes that the user just starts at the first step or wants to restart the process. The data of the wizard will be resetted before rendering the first step.

```
class fobi.wizard.views.views.SessionWizardView (**kwargs)
    Bases: formtools.wizard.views.SessionWizardView, fobi.wizard.views.views.PatchGetMixin
```

A WizardView with pre-configured SessionStorage backend.

```
get (request, *args, **kwargs)
    GET requests.
```

This method handles GET requests.

If a GET request reaches this point, the wizard assumes that the user just starts at the first step or wants to restart the process. The data of the wizard will be resetted before rendering the first step.

```
class fobi.wizard.views.views.CookieWizardView (**kwargs)
    Bases: formtools.wizard.views.CookieWizardView, fobi.wizard.views.views.PatchGetMixin
```

A WizardView with pre-configured CookieStorage backend.

```
get (request, *args, **kwargs)
    GET requests.
```

This method handles GET requests.

If a GET request reaches this point, the wizard assumes that the user just starts at the first step or wants to restart the process. The data of the wizard will be resetted before rendering the first step.

```

## fobi.app module

```

fobi.app.app_name (path, reduce_depth_by=1)
    Return another path by reducing the depth by one.

```

### Parameters

- **path** (*str*) – Absolute app path (from project root).
- **reduce\_depth\_by** (*int*) –

**Return str**

`fobi.app.app_config` (*path*, *config\_app\_path*=*'apps.Config'*)  
App config.

**Parameters**

- **path** (*str*) – Absolute app path (from project root).
- **config\_app\_path** (*str*) – Relative config path (from app root)

**Return str**

## fobi.apps module

```
class fobi.apps.Config(app_name, app_module)
    Bases: django.apps.config AppConfig
    Config.
    label = 'fobi'
    name = 'fobi'
```

## fobi.base module

```
fobi.base.assemble_form_field_widget_class(base_class, plugin)
    Assemble form field widget class.
    Finish this or remove.
    #TODO
```

```
class fobi.base.BaseDataStorage
    Bases: object
    Base storage data.
```

```
class fobi.base.BaseFormFieldPluginForm
    Bases: fobi.base.BasePluginForm
    Base form for form field plugins.
    help_text = <django.forms.fields.CharField object>
    label = <django.forms.fields.CharField object>
    name = <django.forms.fields.CharField object>
    plugin_data_fields = [('name', ''), ('label', ''), ('help_text', ''), ('required', False)]
    required = <django.forms.fields.BooleanField object>
    validate_plugin_data(form_element_entries, request=None)
        Validate plugin data.
```

**Parameters**

- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry`.
- **request** (*django.http.HttpRequest*) –

**Return bool**

**class** `fobi.base.BasePlugin` (*user=None*)

Bases: `object`

Base plugin.

Base form field from which every form field should inherit.

#### Properties

- **uid (string): Plugin uid (obligatory).** Example value: ‘dummy’, ‘wysiwyg’, ‘news’.
- **name (string): Plugin name (obligatory).** Example value: ‘Dummy plugin’, ‘WYSIWYG’, ‘Latest news’.
- **description (string): Plugin decription (optional).** Example value: ‘Dummy plugin used just for testing’.
- **help\_text (string): Plugin help text (optional).** This text would be shown in `fobi.views.add_form_plugin_entry` and `fobi.views.edit_form_plugin_entry` views.
- **form: Plugin form (optional).** A subclass of `django.forms.Form`. Should be given in case plugin is configurable.
- **add\_form\_template (str) (optional): Add form template (optional).** If given, overrides the `fobi.views.add_form_handler_entry` default template.
- **edit\_form\_template (string): Edit form template (optional).** If given, overrides the `fobi.views.edit_form_handler_entry` default template.
- **html\_classes (list):** List of extra HTML classes for the plugin.
- **group (string): Plugin are grouped under the specified group.** Override in your plugin if necessary.

**add\_form\_template = None**

**clone\_plugin\_data** (*entry*)

Clone plugin data.

Used when copying entries. If any objects or files are created by plugin, they should be cloned.

**Parameters** `fobi.models.AbstractPluginEntry` – Instance of `fobi.models.AbstractPluginEntry`.

**Return string** JSON dumped string of the cloned plugin data. The returned value would be inserted as is into the `fobi.models.AbstractPluginEntry.plugin_data` field.

**delete\_plugin\_data** ()

Delete plugin data (internal method).

Used in `fobi.views.delete_form_entry` and `fobi.views.delete_form_handler_entry`. Fired automatically, when `fobi.models.FormEntry` object is about to be deleted. Make use of it if your plugin creates database records or files that are not monitored externally but by fobi only.

**description = None**

**edit\_form\_template = None**

**form = None**

**get\_cloned\_plugin\_data** (*update={}*)

Get cloned plugin data.

Get the cloned plugin data and returns it in a JSON dumped format.

**Parameters** `update` (*dict*) –

**Return string** JSON dumped string of the cloned plugin data.

**Example**

In the `get_cloned_plugin_data` method of your plugin, do as follows:

```
>>> def clone_plugin_data(self, dashboard_entry):
>>>     cloned_image = clone_file(self.data.image, relative_path=True)
>>>     return self.get_cloned_plugin_data(
>>>         update={'image': cloned_image}
>>>     )
```

**get\_form()**

Get the plugin form class.

Override this method in your subclassed `fobi.base.BasePlugin` class when you need your plugin setup to vary depending on the placeholder, workspace, user or request given. By default returns the value of the `form` attribute defined in your plugin.

**Return** `django.forms.ModelForm` Subclass of `django.forms.ModelForm` or `django.forms.ModelForm`.

**get\_initialised\_create\_form** (*data=None, files=None, initial\_data=None*)

Get initialized create form.

Used `fobi.views.add_form_element_entry` and `fobi.views.add_form_handler_entry` view to gets initialised form for object to be created.

**get\_initialised\_create\_form\_or\_404** (*data=None, files=None*)

Get initialized create form or page 404.

Same as `get_initialised_create_form` but raises `django.http.Http404` on errors.

**get\_initialised\_edit\_form** (*data=None, files=None, auto\_id='id\_%s', prefix=None, initial=None, error\_class=<class 'django.forms.utils.ErrorList'>, label\_suffix=':', empty\_permitted=False, instance=None*)

Get initialized edit form.

Used in `fobi.views.edit_form_element_entry` and `fobi.views.edit_form_handler_entry` views.

**get\_initialised\_edit\_form\_or\_404** (*data=None, files=None, auto\_id='id\_%s', prefix=None, error\_class=<class 'django.forms.utils.ErrorList'>, label\_suffix=':', empty\_permitted=False*)

Get initialized edit form or page 404.

Same as `get_initialised_edit_form` but raises `django.http.Http404` on errors.

**get\_instance()**

Get instance.

**get\_plugin\_form\_data()**

Get plugin form data.

Fed as `initial` argument to the plugin form when initialising the instance for adding or editing the plugin. Override in your plugin class if you need customisations.

**get\_updated\_plugin\_data** (*update={}*)

Get updated plugin data.

Returns it in a JSON dumped format.

**Parameters** *update* (*dict*) –

**Return string** JSON dumped string of the cloned plugin data.

**get\_widget** (*request=None, as\_instance=False*)

Get the plugin widget.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **as\_instance** (*bool*) –

**Return mixed** Subclass of *fobi.base.BasePluginWidget* or instance of subclassed *fobi.base.BasePluginWidget* object.

**group** = <django.utils.functional.\_\_proxy\_\_ object>

**help\_text** = None

**html\_class**

HTML class.

A massive work on positioning the plugin and having it to be displayed in a given width is done here. We should be getting the plugin widget for the plugin given and based on its' properties (static!) as well as on plugin position (which we have from model), we can show the plugin with the exact class.

**html\_classes** = []

**html\_id**

HTML id.

**load\_plugin\_data** (*plugin\_data*)

Load plugin data.

Load the plugin data saved in *fobi.models.FormElementEntry* or *fobi.models.FormHandlerEntry*. Plugin data is saved in JSON string.

**Parameters** *plugin\_data* (*string*) – JSON string with plugin data.

**media\_css** = []

**media\_js** = []

**name** = None

**plugin\_data\_repr** ()

Plugin data repr.

Human readable representation of plugin data. A very basic way would be just:

```
>>> return self.data.__dict__
```

**Return string**

**post\_processor** ()

Post-processor (self).

Redefine in your subclassed plugin when necessary.

Post process plugin data here (before rendering). This method is being called after the data has been loaded into the plugin.

Note, that request (django.http.HttpRequest) is available (self.request).

**pre\_processor** ()

Pre-processor (callback).

Redefine in your subclassed plugin when necessary.

Pre process plugin data (before rendering). This method is being called before the data has been loaded into the plugin.

Note, that request (django.http.HttpRequest) is available ( self.request).

**process** (plugin\_data=None, fetch\_related\_data=False)

Process.

Init plugin with data.

**process\_plugin\_data** (fetch\_related\_data=False)

Processes plugin data.

**render** (request=None)

Renders the plugin HTML.

**Parameters** **request** (django.http.HttpRequest) –

**Return string**

**storage** = None

**uid** = None

**update\_plugin\_data** (entry)

Update plugin data.

Used in `fobi.management.commands.fobi_update_plugin_data`.

Some plugins would contain data fetched from various sources (models, remote data). Since form entries are by definition loaded extremely much, you are advised to store as much data as possible in `plugin_data` field of `fobi.models.FormElementEntry` or `fobi.models.FormHandlerEntry`. Some externally fetched data becomes invalid after some time and needs updating. For that purpose, in case if your plugin needs that, re-define this method in your plugin. If you need your data to be periodically updated, add a cron-job which would run `fobi_update_plugin_data` management command (see `fobi.management.commands.fobi_update_plugin_data` module).

**Parameters** or **fobi.models.FormHandlerEntry** ([fobi.models.FormElementEntry](#)) –

Instance of `fobi.models.FormHandlerEntry`.

**Return dict** Should return a dictionary containing data of fields to be updated.

**widget** = None

**class** `fobi.base.BasePluginForm`

Bases: `object`

Not a form actually; defined for magic only.

**Property iterable plugin\_data\_fields** Fields to get when calling the `get_plugin_data` method.

These field will be JSON serialized. All other fields, even if they are part of the form, won't be. Make sure all fields are serializable. If some of them aren't, override the `save_plugin_data` method and make them serializable there. See `fobi.contrib.plugins.form_elements.fields.select.forms` as a good example.

**Example**

```
>>> plugin_data_fields = (
>>>     ('name', ''),
>>>     ('active': False)
>>> )
```

**get\_plugin\_data** (*request=None, json\_format=True*)

Get plugin data.

Data that would be saved in the `plugin_data` field of the `fobi.models.FormElementEntry` or `“fobi.models.FormHandlerEntry”` subclassed model.

**Parameters** *request* (*django.http.HttpRequest*) –

**plugin\_data\_fields** = `None`

**save\_plugin\_data** (*request=None*)

Save plugin data.

Dummy, but necessary.

**validate\_plugin\_data** (*form\_element\_entries, request=None*)

Validate plugin data.

**Parameters**

- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry`.
- **request** (*django.http.HttpRequest*) –

**Return** `bool`

**class** `fobi.base.BaseRegistry`

Bases: `object`

Base registry.

Registry of plugins. It’s essential, that class registered has the `uid` property.

If `fail_on_missing_plugin` is set to `True`, an appropriate exception (`plugin_not_found_exception_cls`) is raised in cases if plugin could’t be found in the registry.

**Property** `mixed` type

**Property** `bool` `fail_on_missing_plugin`

**Property** `fobi.exceptions.DoesNotExist` `plugin_not_found_exception_cls`

**Property** `str` `plugin_not_found_error_message`

**fail\_on\_missing\_plugin** = `False`

**get** (*uid, default=None*)

Get the given entry from the registry.

**Parameters**

- **uid** (*string*) –
- **default** (*mixed*) –

:return `mixed`.

**plugin\_not\_found\_error\_message** = “Can’t find plugin with uid ‘{0}’ in ‘{1}’ registry.”

**plugin\_not\_found\_exception\_cls**

alias of `DoesNotExist`

**register** (*cls*, *force=False*)

Registers the plugin in the registry.

**Parameters**

- **cls** (*mixed*) –
- **force** (*bool*) –

**type** = `None`

**unregister** (*cls*)

Un-register.

**class** `fobi.base.ClassProperty`

Bases: `property`

`ClassProperty`.

`fobi.base.classproperty`

alias of `ClassProperty`

`fobi.base.collect_plugin_media` (*form\_element\_entries*, *request=None*)

Collect the plugin media for form element entries given.

**Parameters**

- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` instances.
- **request** (*django.http.HttpRequest*) –

**Return dict** Returns a dict containing the ‘js’ and ‘css’ keys. Correspondent values of those keys are lists containing paths to the CSS and JS media files.

`fobi.base.ensure_autodiscover` ()

Ensure that plugins are auto-discovered.

The form callbacks registry is intentionally left out, since they will be auto-discovered in any case if other modules are discovered.

`fobi.base.fire_form_callbacks` (*form\_entry*, *request*, *form*, *stage=None*)

Fire form callbacks.

**Parameters**

- **form\_entry** (*fobi.models.FormEntry*) –
- **request** (*django.http.HttpRequest*) –
- **form** (*django.forms.Form*) –
- **stage** (*string*) –

**Return** `django.forms.Form` `form`

**class** `fobi.base.FormCallback`

Bases: `object`

Base form callback.

**callback** (*form\_entry*, *request*, *form*)

Callback.

Custom callback code should be implemented here.

#### Parameters

- **form\_entry** (`fobi.models.FormEntry`) – Instance of `fobi.models.FormEntry`.
- **request** (`django.http.HttpRequest`) –
- **form** (`django.forms.Form`) –

**stage** = None

**class** `fobi.base.FormCallbackRegistry`

Bases: `object`

Registry of callbacks.

Holds callbacks for stages listed in the `fobi.constants.CALLBACK_STAGES`.

**get\_callbacks** (*stage=None*)

Get callbacks for the stage given.

**Parameters** **stage** (*string*) –

**Return list**

**register** (*cls*)

Registers the plugin in the registry.

**Parameters** **cls** (*mixed*) –

**uidfy** (*cls*)

Makes a UID string from the class given.

**Parameters** **cls** (*mixed*) –

**Return string**

**class** `fobi.base.FormElementPlugin` (*user=None*)

Bases: `fobi.base.BasePlugin`

Base form element plugin.

**Property** `fobi.base.FormElementPluginDataStorage` **storage**

**Property** `bool` **has\_value** If set to False, ignored (removed) from the POST when processing the form.

**get\_form\_field\_instances** (*request=None*)

Get the instances of form fields, that plugin contains.

**Parameters** **request** (`django.http.HttpRequest`) –

**Return list** List of Django form field instances.

#### Example

```
>>> from django.forms.fields import CharField, IntegerField, TextField
>>> [CharField(max_length=100), IntegerField(), TextField()]
```

**get\_origin\_kwargs\_update\_func\_results** (*kwargs\_update\_func, form\_element\_entry, origin, extra={}, widget\_cls=None*)

Get origin kwargs update func results.

If `kwargs_update_func` is given, is callable and returns results without failures, return the result. Otherwise - return None.

**get\_origin\_return\_func\_results** (*return\_func, form\_element\_entry, origin*)

Get origin return func results.

If *return\_func* is given, is callable and returns results without failures, return the result. Otherwise - return None.

**has\_value** = False

**is\_hidden** = False

**storage**

alias of *FormElementPluginDataStorage*

**submit\_plugin\_form\_data** (*form\_entry, request, form*)

Submit plugin form data.

Called on form submission (when user actually posts the data to assembled form).

#### Parameters

- **form\_entry** (*fobi.models.FormEntry*) – Instance of *fobi.models.FormEntry*.
- **request** (*django.http.HttpRequest*) –
- **form** (*django.forms.Form*) –

**class** *fobi.base.FormElementPluginDataStorage*

Bases: *fobi.base.BaseDataStorage*

Storage for *FormElementPlugin* data.

**class** *fobi.base.FormElementPluginRegistry*

Bases: *fobi.base.BaseRegistry*

Form element plugins registry.

**fail\_on\_missing\_plugin** = True

**plugin\_not\_found\_exception\_cls**

alias of *FormElementPluginDoesNotExist*

**type** = (<class 'fobi.base.FormElementPlugin'>, <class 'fobi.base.FormFieldPlugin'>)

**class** *fobi.base.FormElementPluginWidget* (*plugin*)

Bases: *fobi.base.BasePluginWidget*

Form element plugin widget.

**storage**

alias of *FormElementPluginWidgetDataStorage*

**class** *fobi.base.FormElementPluginWidgetRegistry*

Bases: *fobi.base.BasePluginWidgetRegistry*

Registry of form element plugins.

**type**

alias of *FormElementPluginWidget*

**class** *fobi.base.FormFieldPlugin* (*user=None*)

Bases: *fobi.base.FormElementPlugin*

Form field plugin.

**has\_value** = True

**class** `fobi.base.FormHandlerPlugin` (*user=None*)

Bases: `fobi.base.BasePlugin`

Form handler plugin.

**Property** `fobi.base.FormHandlerPluginDataStorage` **storage**

**Property** `bool allow_multiple` If set to True, plugin can be used multiple times within (per form). Otherwise - just once.

**allow\_multiple** = True

**custom\_actions** (*form\_entry, request=None*)

Custom actions.

Override this method in your form handler if you want to specify custom actions. Note, that expected return value of this method is an iterable with a triple, where the first item is the URL of the action and the second item is the action title and the third item is the icon class of the action.

#### Example

```
>>> return (
>>>     ('/add-to-favorites/',
>>>      'Add to favourites',
>>>      'glyphicon glyphicon-favourties'),
>>> )
```

**get\_custom\_actions** (*form\_entry, request=None*)

Internal method to for obtaining the `get_custom_actions`.

**run** (*form\_entry, request, form, form\_element\_entries=None*)

Run.

Custom code should be implemented here.

#### Parameters

- **form\_entry** (`fobi.models.FormEntry`) – Instance of `fobi.models.FormEntry`.
- **request** (`django.http.HttpRequest`) –
- **form** (`django.forms.Form`) –
- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` objects.

**Return mixed** May be a tuple (bool, mixed) or None

**storage**

alias of `FormHandlerPluginDataStorage`

**class** `fobi.base.FormHandlerPluginDataStorage`

Bases: `fobi.base.BaseDataStorage`

Storage for `FormHandlerPlugin` data.

**class** `fobi.base.FormHandlerPluginRegistry`

Bases: `fobi.base.BaseRegistry`

Form handler plugins registry.

**fail\_on\_missing\_plugin** = True

**plugin\_not\_found\_exception\_cls**

alias of `FormHandlerPluginDoesNotExist`

**type**  
alias of *FormHandlerPlugin*

**class** *fobi.base.FormHandlerPluginWidget* (*plugin*)  
Bases: *fobi.base.BasePluginWidget*  
Form handler plugin widget.

**storage**  
alias of *FormHandlerPluginWidgetDataStorage*

**class** *fobi.base.FormHandlerPluginWidgetRegistry*  
Bases: *fobi.base.BasePluginWidgetRegistry*  
Registry of form handler plugins.

**type**  
alias of *FormHandlerPluginWidget*

**class** *fobi.base.FormWizardHandlerPlugin* (*user=None*)  
Bases: *fobi.base.BasePlugin*  
Form wizard handler plugin.

**Property** *fobi.base.FormWizardHandlerPluginDataStorage* **storage**

**Property** **bool** *allow\_multiple* If set to True, plugin can be used multiple times within (per form).  
Otherwise - just once.

DONE

**allow\_multiple** = True

**custom\_actions** (*form\_wizard\_entry, request=None*)  
Custom actions.

Override this method in your form handler if you want to specify custom actions. Note, that expected return value of this method is an iterable with a triple, where the first item is the URL of the action and the second item is the action title and the third item is the icon class of the action.

### Example

```
>>> return (
>>>     ('/add-to-favorites/',
>>>     'Add to favourites',
>>>     'glyphicon glyphicon-favourties'),
>>> )
```

**get\_custom\_actions** (*form\_wizard\_entry, request=None*)  
Internal method to for obtaining the *get\_custom\_actions*.

**run** (*form\_wizard\_entry, request, form\_list, form\_wizard, form\_element\_entries=None*)  
Run.

Custom code should be implemented here.

### Parameters

- **form\_wizard\_entry** (*fobi.models.FormEntry*) – Instance of *fobi.models.FormEntry*.
- **request** (*django.http.HttpRequest*) –
- **form** (*django.forms.Form*) –

- **form\_element\_entries** (*iterable*) – Iterable of `fobi.models.FormElementEntry` objects.

**Return mixed** May be a tuple (bool, mixed) or None

**storage**

alias of `FormWizardHandlerPluginDataStorage`

**class** `fobi.base.FormWizardHandlerPluginDataStorage`

Bases: `fobi.base.BaseDataStorage`

Storage for `FormWizardHandlerPlugin` handler data.

**class** `fobi.base.FormWizardHandlerPluginRegistry`

Bases: `fobi.base.BaseRegistry`

Form wizard handler plugins registry.

**fail\_on\_missing\_plugin = True**

**plugin\_not\_found\_exception\_cls**

alias of `FormWizardHandlerPluginDoesNotExist`

**type**

alias of `FormWizardHandlerPlugin`

**class** `fobi.base.FormWizardHandlerPluginWidget` (*plugin*)

Bases: `fobi.base.BasePluginWidget`

Form wizard handler plugin widget.

**storage**

alias of `FormWizardHandlerPluginWidgetDataStorage`

**class** `fobi.base.FormWizardHandlerPluginWidgetRegistry`

Bases: `fobi.base.BasePluginWidgetRegistry`

Registry of form wizard handler plugins.

**type**

alias of `FormWizardHandlerPluginWidget`

`fobi.base.get_form_element_plugin_widget` (*plugin\_uid*, *request=None*, *as\_instance=False*, *theme=None*)

Get the form element plugin widget for the `plugin_uid` given.

**Parameters**

- **plugin\_uid** (*str*) – UID of the plugin to get the widget for.
- **request** (`django.http.HttpRequest`) –
- **as\_instance** (*bool*) –
- **theme** (`fobi.base.BaseTheme`) – Subclass of.

**Return BasePluginWidget** Subclass of.

`fobi.base.get_form_handler_plugin_widget` (*plugin\_uid*, *request=None*, *as\_instance=False*, *theme=None*)

Get the form handler plugin widget for the `plugin_uid` given.

**Parameters**

- **plugin\_uid** (*str*) – UID of the plugin to get the widget for.
- **request** (`django.http.HttpRequest`) –

- **as\_instance** (*bool*) –
- **theme** (*fobi.base.BaseTheme*) – Subclass of.

**Return BasePluginWidget** Subclass of.

`fobi.base.get_form_wizard_handler_plugin_widget(plugin_uid, request=None, as_instance=False, theme=None)`

Get the form wizard handler plugin widget for the `plugin_uid` given.

**Parameters**

- **plugin\_uid** (*str*) – UID of the plugin to get the widget for.
- **request** (*django.http.HttpRequest*) –
- **as\_instance** (*bool*) –
- **theme** (*fobi.base.BaseTheme*) – Subclass of.

**Return BasePluginWidget** Subclass of.

`fobi.base.get_plugin_widget(registry, plugin_uid, request=None, as_instance=False, theme=None)`

Get the plugin widget for the `plugin_uid` given.

Looks up in the `registry` provided.

**Parameters**

- **registry** (*fobi.base.BasePluginWidgetRegistry*) – Subclass of.
- **plugin\_uid** (*str*) – UID of the plugin to get the widget for.
- **request** (*django.http.HttpRequest*) –
- **as\_instance** (*bool*) –
- **theme** (*fobi.base.BaseTheme*) – Subclass of.

**Return BasePluginWidget** Subclass of.

`fobi.base.get_processed_form_data(form, form_element_entries)`

Gets processed form data.

Simply fires both `fobi.base.get_cleaned_data` and `fobi.base.get_field_name_to_label_map` functions and returns the result.

**Parameters**

- **form** (*django.forms.Form*) –
- **form\_element\_entries** (*iterable*) – Iterable of form element entries.

**Return tuple**

`fobi.base.get_processed_form_wizard_data(form_wizard, form_list, form_element_entries)`

Get processed form wizard data.

`fobi.base.get_registered_form_callbacks(stage=None)`

Get registered form callbacks for the stage given.

`fobi.base.get_registered_form_element_plugin_uids(flatten=True)`

Get registered form element plugin uids.

Gets a list of registered plugins in a form if tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

**Return list**

`fobi.base.get_registered_form_element_plugins()`

Get registered form element plugins.

Gets a list of registered plugins in a form if tuple (plugin name, plugin description). If not yet autodiscovered, autodiscovers them.

**Return list**

`fobi.base.get_registered_form_handler_plugin_uids(flattern=True)`

Get registered form handler plugin uids.

Gets a list of UIDs of registered form handler plugins. If not yet auto-discovered, auto-discovers them.

**Return list**

`fobi.base.get_registered_form_handler_plugins(as_instances=False)`

Get registered form handler plugins.

Gets a list of registered plugins in a form of tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

**Return list**

`fobi.base.get_registered_form_wizard_handler_plugin_uids(flattern=True)`

Get registered form handler plugin uids.

Gets a list of UIDs of registered form wizard handler plugins. If not yet auto-discovered, auto-discovers them.

**Return list**

`fobi.base.get_registered_form_wizard_handler_plugins(as_instances=False)`

Get registered form handler wizard plugins.

Gets a list of registered plugins in a form of tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

**Return list**

`fobi.base.get_registered_plugin_uids(registry, flattern=True, sort_items=True)`

Get a list of registered plugin uids as a list .

If not yet auto-discovered, auto-discovers them.

The *sort\_items* is applied only if *flattern* is True.

**Parameters**

- **registry** –
- **flattern** (*bool*) –
- **sort\_items** (*bool*) –

**Return list**

`fobi.base.get_registered_plugins(registry, as_instances=False, sort_items=True)`

Get registered plugins.

Get a list of registered plugins in a form if tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

**Parameters**

- **registry** –
- **as\_instances** (*bool*) –
- **sort\_items** (*bool*) –

#### Return list

`fobi.base.get_registered_theme_uids (flatten=True)`

Get registered theme uids.

Gets a list of registered themes in a form of tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

#### Return list

`fobi.base.get_registered_themes ()`

Get registered themes.

Gets a list of registered themes in form of tuple (plugin name, plugin description). If not yet auto-discovered, auto-discovers them.

#### Return list

`fobi.base.run_form_handlers (form_entry, request, form, form_element_entries=None)`

Run form handlers.

#### Parameters

- **form\_entry** (`fobi.models.FormEntry`) –
- **request** (`django.http.HttpRequest`) –
- **form** (`django.forms.Form`) –
- **form\_element\_entries** (*iterable*) –

**Return tuple** List of success responses, list of error responses

`fobi.base.run_form_wizard_handlers (form_wizard_entry, request, form_list, form_wizard, form_element_entries=None)`

Run form wizard handlers.

#### Parameters

- **form\_wizard\_entry** (`fobi.models.FormWizardEntry`) –
- **request** (`django.http.HttpRequest`) –
- **form\_list** (*list*) – List of `django.forms.Form` objects.
- **form\_wizard** (`fobi.wizard.views.dynamic.DynamicWizardView`) – The form wizard view object.
- **form\_element\_entries** (*iterable*) – Iterable of `fobi.base.FormElementEntry` objects.

**Return tuple** List of success responses, list of error responses

`fobi.base.validate_form_element_plugin_uid (plugin_uid)`

Validate the form element plugin uid.

**Parameters** `plugin_uid` (*string*) –

**Return bool**

`fobi.base.validate_form_handler_plugin_uid (plugin_uid)`

Validate the plugin uid.

**Parameters** `plugin_uid` (*string*) –

**Return bool**

`fobi.base.validate_form_wizard_handler_plugin_uid(plugin_uid)`

Validate the plugin uid.

**Parameters** `plugin_uid` (*string*) –

**Return** bool

`fobi.base.validate_theme_uid(plugin_uid)`

Validate the theme uid.

**Parameters** `plugin_uid` (*string*) –

**Return** bool

## fobi.compat module

**class** `fobi.compat.User` (\*args, \*\*kwargs)

Bases: `django.contrib.auth.models.AbstractUser`

Users within the Django authentication system are represented by this model.

Username, password and email are required. Other fields are optional.

**exception** `DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception** `User.MultipleObjectsReturned`

Bases: `django.core.exceptions.MultipleObjectsReturned`

`User.formelement_set`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`User.formentry_set`

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`User.formhandler_set`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**User.formwizardentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**User.formwizardhandler\_set**

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**User.get\_next\_by\_date\_joined(\*moreargs, \*\*morekwargs)**

**User.get\_previous\_by\_date\_joined(\*moreargs, \*\*morekwargs)**

**User.groups**

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**User.id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**User.logentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

#### User.registrationprofile

Accessor to the related object on the reverse side of a one-to-one relation.

In the example:

```
class Restaurant(Model):
    place = OneToOneField(Place, related_name='restaurant')
```

place.restaurant is a ReverseOneToOneDescriptor instance.

#### User.savedformdataentry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### User.savedformwizarddataentry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### User.user\_permissions

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

## fobi.conf module

fobi.conf.get\_setting(setting, override=None)

Get setting.

Get a setting from fobi conf module, falling back to the default.

If override is not None, it will be used instead of the setting.

#### Parameters

- **setting** – String with setting name
- **override** – Value to use when no setting is available. Defaults to None.

**Returns** Setting value.

## fobi.constants module

## fobi.context\_processors module

`fobi.context_processors.dynamic_values(request)`

Dynamic values exposed to public forms.

`fobi.context_processors.form_importers(request)`

Form importers.

`fobi.context_processors.theme(request)`

Get active theme.

**Parameters** `request` (*django.http.HttpRequest*) –

**Return** `fobi.base.BaseTheme` Instance of `fobi.base.BaseTheme`.

## fobi.data\_structures module

`class fobi.data_structures.SortableDict(data=None)`

Bases: `dict`

SortableDict.

A dictionary that keeps its keys in the order in which they're inserted. Very similar to (and partly based on) `SortedDict` of the Django, but has several additional methods implemented, such as: `insert_before_key` and `insert_after_key`.

**clear()**

Clear.

**copy()**

Returns a copy of this object.

**insert(index, key, value)**

Inserts the key, value pair before the item with the given index.

**insert\_after\_key(target\_key, key, value, fail\_silently=True)**

Insert the {key: value} after the `target_key`.

### Parameters

- **target\_key** (*immutable*) –
- **key** (*immutable*) –
- **value** (*mutable*) –
- **fail\_silently** (*boolean*) –
- **offset** (*int*) –

### Return bool

**insert\_before\_key(target\_key, key, value, fail\_silently=True, offset=0)**

Insert the {key: value} before the `target_key`.

### Parameters

- **target\_key** (*immutable*) –

- **key** (*immutable*) –
- **value** (*mutable*) –
- **fail\_silently** (*boolean*) –
- **offset** (*int*) –

**Return bool**

**items** ()

**iteritems** ()

Iter items (internal method).

**iterkeys** ()

**itervalues** ()

Iter values (internal method).

**keys** ()

**move\_after\_key** (*source\_key*, *target\_key*, *fail\_silently=True*)

Move the {key: value} after the given *source\_key*.

**Parameters**

- **source\_key** (*immutable*) –
- **target\_key** (*immutable*) –
- **fail\_silently** (*boolean*) –

**Return bool**

**move\_before\_key** (*source\_key*, *target\_key*, *fail\_silently=True*, *offset=0*)

Move the {key: value} before the given *source\_key*.

**Parameters**

- **source\_key** (*immutable*) –
- **target\_key** (*immutable*) –
- **fail\_silently** (*boolean*) –
- **offset** (*int*) –

**Return bool**

**pop** (*k*, *\*args*)

Pop.

**popitem** ()

Pop item.

**setdefault** (*key*, *default*)

Set default.

**update** (*dict\_*)

Update.

**value\_for\_index** (*index*)

Returns the value of the item at the given zero-based index.

**values** ()

## fobi.decorators module

`fobi.decorators.permissions_required`(*perms*, *satisfy*='all', *login\_url*=None, *raise\_exception*=False)

Check for the permissions given based on the strategy chosen.

### Parameters

- **perms** (*iterable*) –
- **satisfy** (*string*) – Allowed values are “all” and “any”.
- **login\_url** (*string*) –
- **raise\_exception** (*bool*) – If set to True, the `PermissionDenied` exception is raised on failures.

### Return bool

### Example

```
>>> @login_required
>>> @permissions_required(satisfy='any', perms=[
>>>     'fobi.add_formentry',
>>>     'fobi.change_formentry',
>>>     'fobi.delete_formentry',
>>>     'fobi.add_formententry',
>>>     'fobi.change_formententry',
>>>     'fobi.delete_formententry',
>>> ])
>>> def edit_dashboard(request):
>>>     # your code
```

`fobi.decorators.all_permissions_required`(*perms*, *login\_url*=None, *raise\_exception*=False)

Check for the permissions given based on SATISFY\_ALL strategy chosen.

### Example

```
>>> @login_required
>>> @all_permissions_required([
>>>     'fobi.add_formentry',
>>>     'fobi.change_formentry',
>>>     'fobi.delete_formentry',
>>>     'fobi.add_formententry',
>>>     'fobi.change_formententry',
>>>     'fobi.delete_formententry',
>>> ])
>>> def edit_dashboard(request):
>>>     # your code
```

`fobi.decorators.any_permission_required`(*perms*, *login\_url*=None, *raise\_exception*=False)

Check for the permissions given based on SATISFY\_ANY strategy chosen.

### Example

```
>>> @login_required
>>> @any_permission_required([
>>>     'fobi.add_formentry',
>>>     'fobi.change_formentry',
>>>     'fobi.delete_formentry',
>>>     'fobi.add_formententry',
>>>     'fobi.change_formententry',
>>>     'fobi.delete_formententry',
>>> ])
```

```
>>> 'fobi.delete_formelemententry',
>>> ])
>>> def edit_dashboard(request):
>>>     # your code
```

## fobi.defaults module

## fobi.discover module

`fobi.discover.autodiscover()`  
Auto-discovers files that should be found by fobi.

## fobi.dynamic module

`fobi.dynamic.assemble_form_class(form_entry, base_class=<class 'django.forms.forms.BaseForm'>, request=None, origin=None, origin_kwargs_update_func=None, origin_return_func=None, form_element_entries=None)`

Assemble a form class by given entry.

### Parameters

- **form\_entry** –
- **base\_class** –
- **request** (*django.http.HttpRequest*) –
- **origin** (*string*) –
- **origin\_kwargs\_update\_func** (*callable*) –
- **origin\_return\_func** (*callable*) –
- **form\_element\_entries** (*iterable*) – If given, used instead of `form_entry.formelemententry_set.all` (no additional database hit).

`fobi.dynamic.assemble_form_wizard_class(form_wizard_entry, base_class=<class 'formtools.wizard.views.SessionWizardView'>, request=None, origin=None, origin_kwargs_update_func=None, origin_return_func=None, form_wizard_form_entries=None, template_name=None)`

Assemble form wizard class.

## fobi.exceptions module

**exception** `fobi.exceptions.BaseException`

Bases: `exceptions.Exception`

Base exception.

**exception** `fobi.exceptions.ImproperlyConfigured`

Bases: `fobi.exceptions.BaseException`

Improperly configured.

Exception raised when developer didn't configure/write the code properly.

**exception** `fobi.exceptions.InvalidRegistryItemType`

Bases: `exceptions.ValueError`, `fobi.exceptions.BaseException`

Invalid registry item type.

Raised when an attempt is made to register an item in the registry which does not have a proper type.

**exception** `fobi.exceptions.DoesNotExist`

Bases: `fobi.exceptions.BaseException`

Raised when something does not exist.

**exception** `fobi.exceptions.ThemeDoesNotExist`

Bases: `fobi.exceptions.DoesNotExist`

Raised when no theme with given uid can be found.

**exception** `fobi.exceptions.PluginDoesNotExist`

Bases: `fobi.exceptions.DoesNotExist`

Raised when no plugin with given uid can be found.

**exception** `fobi.exceptions.FormElementPluginDoesNotExist`

Bases: `fobi.exceptions.PluginDoesNotExist`

Raised when no form element plugin with given uid can be found.

**exception** `fobi.exceptions.FormHandlerPluginDoesNotExist`

Bases: `fobi.exceptions.PluginDoesNotExist`

Raised when no form handler plugin with given uid can be found.

**exception** `fobi.exceptions.FormWizardHandlerPluginDoesNotExist`

Bases: `fobi.exceptions.PluginDoesNotExist`

FormWizardHandlerPlugin does not exist.

Raised when no form wizard handler plugin with given uid can be found.

**exception** `fobi.exceptions.NoDefaultThemeSet`

Bases: `fobi.exceptions.ImproperlyConfigured`

Raised when no active theme is chosen.

**exception** `fobi.exceptions.FormPluginError`

Bases: `fobi.exceptions.BaseException`

Base error for form elements and handlers.

**exception** `fobi.exceptions.FormElementPluginError`

Bases: `fobi.exceptions.FormPluginError`

Raised when form element plugin error occurs.

**exception** `fobi.exceptions.FormHandlerPluginError`

Bases: `fobi.exceptions.FormPluginError`

Raised when form handler plugin error occurs.

**exception** `fobi.exceptions.FormCallbackError`

Bases: `fobi.exceptions.FormPluginError`

Raised when form callback error occurs.

## fobi.form\_importers module

```
class fobi.form_importers.BaseFormImporter(form_entry_cls, form_element_entry_cls,
                                           form_properties=None, form_data=None)
    Bases: object
    Base importer.
    description = None
    extract_field_properties(field_data)
        Extract field properties.
    field_properties_mapping = None
    field_type_prop_name = None
    fields_mapping = None
    get_form_data()
        Get form data.
    get_template_names()
        Get template names.
    get_wizard(request, *args, **kwargs)
        Get wizard.
    import_data(form_properties, form_data)
        Import data.
    name = None
    position_prop_name = None
    templates = None
    uid = None
    wizard = None

class fobi.form_importers.FormImporterPluginRegistry
    Bases: fobi.base.BaseRegistry
    Form importer plugins registry.
    type
        alias of BaseFormImporter

fobi.form_importers.ensure_autodiscover()
    Ensure that form importer plugins are auto-discovered.

fobi.form_importers.get_form_importer_plugin_uids()
    Get form importer plugin uids.

fobi.form_importers.get_form_importer_plugin_urls()
    Gets the form importer plugin URLs as a list of tuples.
```

## fobi.form\_utils module

```
class fobi.form_utils.ErrorDict
    Bases: django.forms.utils.ErrorDict
    A better ErrorDict.
```

```
as_text ()
    As text.
```

```
class fobi.form_utils.ErrorList (initlist=None, error_class=None)
    Bases: django.forms.utils.ErrorList

    A better ErrorList.
```

```
as_text ()
    As text.
```

## fobi.forms module

```
class fobi.forms.BulkChangeFormElementPluginsForm (*args, **kwargs)
    Bases: fobi.forms.BaseBulkChangePluginsForm

    Bulk change form element plugins form.
```

```
class Meta
    Meta class.

    fields = ['groups', 'groups_action', 'users', 'users_action']

    model
        alias of FormElement
```

```
BulkChangeFormElementPluginsForm.base_fields = OrderedDict([('groups', <django.forms.models.ModelForm
```

declared_fields = OrderedDict([('file', <django.forms.fields.FileField object at 0x7f692f6ad550>)])
media

```

## fobi.helpers module

Helpers module. This module can be safely imported from any fobi (sub)module, since it never imports from any of the fobi (sub)modules (except for the *fobi.constants* and *fobi.exceptions* modules).

```

fobi.helpers.admin_change_url(app_label, module_name, object_id, extra_path='',
                              url_title=None)
    Gets an admin change URL for the object given.

```

### Parameters

- **app\_label** (*str*) –
- **module\_name** (*str*) –
- **object\_id** (*int*) –
- **extra\_path** (*str*) –
- **url\_title** (*str*) – If given, an HTML a tag is returned with *url\_title* as the tag title. If left to None just the URL string is returned.

#### Return str

`fobi.helpers.clean_dict` (*source*, *keys=[]*, *values=[]*)  
Removes given keys and values from dictionary.

#### Parameters

- **source** (*dict*) –
- **keys** (*iterable*) –
- **values** (*iterable*) –

#### Return dict

`fobi.helpers.clone_file` (*upload\_dir*, *source\_filename*, *relative\_path=True*)  
Clones the file.

**Parameters** **source\_filename** (*string*) – Source filename.

**Return string** Filename of the cloned file.

`fobi.helpers.combine_dicts` (*headers*, *data*)  
Combine dicts.

Takes two dictionaries, assuming one contains a mapping keys to titles and another keys to data. Joins as string and returns a result dict.

`fobi.helpers.delete_file` (*image\_file*)  
Delete file from disc.

`fobi.helpers.do_slugify` (*s*)  
Slugify.

`fobi.helpers.ensure_unique_filename` (*destination*)  
Makes sure filenames are never overwritten.

**Parameters** **destination** (*string*) –

**Return string**

`fobi.helpers.get_app_label_and_model_name` (*path*)  
Gets app\_label and model\_name from the path given.

**Parameters** **path** (*str*) – Dotted path to the model (without ".model", as stored in the Django *ContentType* model).

**Return tuple** app\_label, model\_name

`fobi.helpers.get_form_element_entries_for_form_wizard_entry` (*form\_wizard\_entry*)  
Get form element entries for the form wizard entry.

`fobi.helpers.get_model_name_for_object` (*obj*)  
Get model name for object.

Django version agnostic.

`fobi.helpers.get_registered_models` (*ignore=[]*)  
Gets registered models as list.

**Parameters** **ignore** (*iterable*) – Ignore the following content types (should be in app\_label.model format (example `auth.User`)).

**Return list**

`fobi.helpers.get_select_field_choices (raw_choices_data)`

Get select field choices.

Used in `radio`, `select` and other choice based fields.

**Parameters** `raw_choices_data` (*str*) –

**Return list**

`fobi.helpers.handle_uploaded_file (upload_dir, image_file)`

Handle uploaded files.

**Parameters** `image_file` (*django.core.files.uploadedfile.InMemoryUploadedFile*) –

**Return string** Path to the image (relative).

`fobi.helpers.iterable_to_dict (items, key_attr_name)`

Converts iterable of certain objects to dict.

**Parameters**

- **items** (*iterable*) –
- **key\_attr\_name** (*string*) – Attribute to use as a dictionary key.

**Return dict**

**class** `fobi.helpers.JSONDataExporter (data, filename)`

Bases: `object`

Exporting the data into JSON.

**export** ()

Export.

**export\_to\_json** ()

Export data to JSON.

`fobi.helpers.lists_overlap (sub, main)`

Check whether lists overlap.

`fobi.helpers.map_field_name_to_label (form)`

Takes a form and creates label to field name map.

**Parameters** `form` (*django.forms.Form*) – Instance of `django.forms.Form`.

**Return dict**

`fobi.helpers.safe_text (text)`

Safe text (encode).

**Return str**

**class** `fobi.helpers.StrippedRequest (request)`

Bases: `object`

Stripped request object.

**META**

Request meta stripped down.

A standard Python dictionary containing all available HTTP headers. Available headers depend on the client and server, but here are some examples:

- `HTTP_ACCEPT_ENCODING`: Acceptable encodings for the response.
- `HTTP_ACCEPT_LANGUAGE`: Acceptable languages for the response.

- HTTP\_HOST: The HTTP Host header sent by the client.
- HTTP\_REFERER: The referring page, if any.
- HTTP\_USER\_AGENT: The clients user-agent string.
- QUERY\_STRING: The query string, as a single (unparsed) string.
- REMOTE\_ADDR: The IP address of the client.

**get\_full\_path()**

Returns the path, plus an appended query string, if applicable.

**is\_ajax()**

Is ajax?

Returns True if the request was made via an XMLHttpRequest, by checking the HTTP\_X\_REQUESTED\_WITH header for the string 'XMLHttpRequest'.

**is\_secure()**

Is secure.

Returns True if the request is secure; that is, if it was made with HTTPS.

**path**

Path.

A string representing the full path to the requested page, not including the scheme or domain.

**class fobi.helpers.StrippedUser(*user*)**

Bases: object

Stripped user object.

**email**

Email.

**get\_full\_name()**

Get full name.

**get\_short\_name()**

Get short name.

**get\_username()**

Get username.

**is\_anonymous()**

Is anonymous.

**fobi.helpers.two\_dicts\_to\_string(*headers, data, html\_element='p'*)**

Two dicts to string.

Takes two dictionaries, assuming one contains a mapping keys to titles and another keys to data. Joins as string and returns wrapped into HTML “p” tag.

**fobi.helpers.uniquify\_sequence(*sequence*)**

Uniqify sequence.

Makes sure items in the given sequence are unique, having the original order preserved.

**Parameters** *sequence* (*iterable*) –

**Return list**

**fobi.helpers.update\_plugin\_data(*entry, request=None*)**

Update plugin data.

Update plugin data of a given entry.

```
fobi.helpers.validate_initial_for_choices(plugin_form, field_name_choices='choices',
                                         field_name_initial='initial')
```

Validate init for choices. Validates the initial value for the choices given.

#### Parameters

- **plugin\_form** (`fobi.base.BaseFormFieldPluginForm`) –
- **field\_name\_choices** (*str*) –
- **field\_name\_initial** (*str*) –

#### Return str

```
fobi.helpers.validate_initial_for_multiple_choices(plugin_form,
                                                  field_name_choices='choices',
                                                  field_name_initial='initial')
```

Validates the initial value for the multiple choices given.

#### Parameters

- **plugin\_form** (`fobi.base.BaseFormFieldPluginForm`) –
- **field\_name\_choices** (*str*) –
- **field\_name\_initial** (*str*) –

#### Return str

```
fobi.helpers.validate_submit_value_as(value)
```

Validates the *SUBMIT\_AS\_VALUE*.

**Parameters** **value** (*str*) –

## fobi.models module

```
class fobi.models.AbstractPluginModel(*args, **kwargs)
```

Bases: `django.db.models.base.Model`

Abstract plugin model.

Used when `fobi.settings.RESTRICT_PLUGIN_ACCESS` is set to `True`.

#### Properties

- **plugin\_uid** (*str*): Plugin UID.
- **users** (`django.contrib.auth.models.User`): White list of the users allowed to use the plugin.
- **groups** (`django.contrib.auth.models.Group`): White list of the user groups allowed to use the plugin.

```
class Meta
```

Meta class.

**abstract** = `False`

```
AbstractPluginModel.get_registered_plugins()
```

Get registered plugins.

```
AbstractPluginModel.groups
```

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`AbstractPluginModel.groups_list()`

Groups list.

Flat list (comma separated string) of groups allowed to use the plugin. Used in Django admin.

#### Return string

`AbstractPluginModel.plugin_uid_admin()`

Plugin uid admin.

Mainly used in admin.

`AbstractPluginModel.plugin_uid_code()`

Plugin uid code.

Mainly used in admin.

`AbstractPluginModel.users`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`AbstractPluginModel.users_list()`

Users list.

Flat list (comma separated string) of users allowed to use the plugin. Used in Django admin.

#### Return string

`class fobi.models.FormElement(*args, **kwargs)`

Bases: `fobi.models.AbstractPluginModel`

Form element.

Form field plugin. Used when `fobi.settings.RESTRICT_PLUGIN_ACCESS` is set to `True`.

#### Properties

- `plugin_uid` (str): Plugin UID.
- `users` (django.contrib.auth.models.User): White list of the users allowed to use the form element plugin.
- `groups` (django.contrib.auth.models.Group): White list of the user groups allowed to use the form element plugin.

`exception DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception** `FormElement.MultipleObjectsReturned`Bases: `django.core.exceptions.MultipleObjectsReturned``FormElement.get_registered_plugins()`

Add choices.

`FormElement.groups`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.`FormElement.id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormElement.objects = <django.db.models.manager.Manager object>``FormElement.plugin_uid`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormElement.users`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.**class** `fobi.models.FormHandler(*args, **kwargs)`Bases: `fobi.models.AbstractPluginModel`Form handler plugin. Used when `fobi.settings.RESTRICT_PLUGIN_ACCESS` is set to `True`.**Properties**

- `plugin_uid` (str): Plugin UID.
- `users` (`django.contrib.auth.models.User`): White list of the users allowed to use the form handler plugin.
- `groups` (`django.contrib.auth.models.Group`): White list of the user groups allowed to use the form handler plugin.

**exception** `DoesNotExist`Bases: `django.core.exceptions.ObjectDoesNotExist`**exception** `FormHandler.MultipleObjectsReturned`Bases: `django.core.exceptions.MultipleObjectsReturned``FormHandler.get_registered_plugins()`

Add choices.

#### FormHandler.groups

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

#### FormHandler.id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

#### FormHandler.objects = <django.db.models.manager.Manager object>

#### FormHandler.plugin\_uid

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

#### FormHandler.users

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**class** `fobi.models.FormWizardHandler` (\*args, \*\*kwargs)

Bases: `fobi.models.AbstractPluginModel`

Form wizard handler plugin. Used when `fobi.settings.RESTRICT_PLUGIN_ACCESS` is set to `True`.

#### Properties

- `plugin_uid` (str): Plugin UID.
- `users` (`django.contrib.auth.models.User`): White list of the users allowed to use the form handler plugin.
- `groups` (`django.contrib.auth.models.Group`): White list of the user groups allowed to use the form handler plugin.

#### exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

#### exception FormWizardHandler.MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

`FormWizardHandler.get_registered_plugins()`

Add choices.

#### FormWizardHandler.groups

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`FormWizardHandler.id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardHandler.objects = <django.db.models.manager.Manager object>`

`FormWizardHandler.plugin_uid`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardHandler.users`

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**class** `fobi.models.BaseAbstractPluginEntry(*args, **kwargs)`

Bases: `django.db.models.base.Model`

Base for `AbstractPluginEntry`.

**Properties**

- `plugin_data` (str): JSON formatted string with plugin data.

**class** `Meta`

Meta class.

**abstract** = False

`BaseAbstractPluginEntry.entry_user`

Get user from the parent container.

`BaseAbstractPluginEntry.get_plugin(fetch_related_data=False, request=None)`

Get plugin.

Gets the plugin class (by `plugin_uid` property), makes an instance of it, serves the data stored in `plugin_data` field (if available). Once all is done, plugin is ready to be rendered.

**Parameters** `fetch_related_data` (bool) – When set to True, plugin is told to re-fetch all related data (stored in models or other sources).

**Return** `fobi.base.BasePlugin` Subclass of `fobi.base.BasePlugin`.

`BaseAbstractPluginEntry.get_registered_plugins()`

Get registered plugins.

`BaseAbstractPluginEntry.get_registry()`

Get registry.

`BaseAbstractPluginEntry.plugin_data`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`BaseAbstractPluginEntry.plugin_name()`

Plugin name.

`BaseAbstractPluginEntry.plugin_uid_code()`

Plugin uid code.

Mainly used in admin.

**class** `fobi.models.AbstractPluginEntry(*args, **kwargs)`

Bases: `fobi.models.BaseAbstractPluginEntry`

Abstract plugin entry.

#### Properties

• `form_entry` (`fobi.models.FormEntry`): Form to which the field plugin belongs to.

• `plugin_uid` (str): Plugin UID.

• `plugin_data` (str): JSON formatted string with plugin data.

**class** `Meta`

Meta class.

**abstract** = False

`AbstractPluginEntry.entry_user`

Get user.

`AbstractPluginEntry.form_entry`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`AbstractPluginEntry.form_entry_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**class** `fobi.models.FormWizardEntry(*args, **kwargs)`

Bases: `django.db.models.base.Model`

Form wizard entry.

**exception** `DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception** `FormWizardEntry.MultipleObjectsReturned`

Bases: `django.core.exceptions.MultipleObjectsReturned`

`FormWizardEntry.created`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormWizardEntry.formwizardformentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**FormWizardEntry.formwizardhandlerentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**FormWizardEntry.get\_absolute\_url()**

Get absolute URL.

Absolute URL, which goes to the form-wizard view view.

**Return string****FormWizardEntry.get\_wizard\_type\_display(\*moreargs, \*\*morekwargs)****FormWizardEntry.id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormWizardEntry.is\_cloneable**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormWizardEntry.is\_public**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormWizardEntry.name**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormWizardEntry.objects = <django.db.models.manager.Manager object>****FormWizardEntry.savedformwizarddataentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`FormWizardEntry.slug`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardEntry.success_page_message`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardEntry.success_page_title`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardEntry.updated`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardEntry.user`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`FormWizardEntry.user_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardEntry.wizard_type`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`class fobi.models.FormEntry(*args, **kwargs)`

Bases: `django.db.models.base.Model`

Form entry.

#### Properties

- *user* (`django.contrib.auth.models.User`): User owning the plugin.
- *wizard* (`str`): Form wizard to which the form entry belongs to.
- *name* (`str`): Form name.
- *slug* (`str`): Form slug.
- *description* (`str`): Form description.
- *is\_public* (`bool`): If set to True, is visible to public.
- *is\_cloneable* (`bool`): If set to True, is cloneable.
- *position* (`int`): Ordering position in the wizard.

`exception DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

`exception FormEntry.MultipleObjectsReturned`

Bases: `django.core.exceptions.MultipleObjectsReturned`

#### FormEntry.action

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

#### FormEntry.created

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

#### FormEntry.formelemententry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### FormEntry.formfieldsetentry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### FormEntry.formhandlerentry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### FormEntry.formwizardformentry\_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create\_forward\_many\_to\_many\_manager() defined below.

#### FormEntry.get\_absolute\_url()

Get absolute URL.

Absolute URL, which goes to the form-entry view view page.

**Return string****FormEntry.id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.is\_cloneable**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.is\_public**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.name**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.objects = <django.db.models.manager.Manager object>****FormEntry.savedformdataentry\_set**

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

**FormEntry.slug**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.success\_page\_message**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.success\_page\_title**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.updated**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormEntry.user**

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

**FormEntry.user\_id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**class** `fobi.models.FormElementEntry(*args, **kwargs)`

Bases: `fobi.models.AbstractPluginEntry`

Form field entry.

### Properties

- `form` (`fobi.models.FormEntry`): Form to which the field plugin belongs to.
- `plugin_uid` (str): Plugin UID.
- `plugin_data` (str): JSON formatted string with plugin data.
- `form_fieldset_entry`: Fieldset.
- `position` (int): Entry position.

### exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

### exception FormElementEntry.MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

### FormElementEntry.form\_entry

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

### FormElementEntry.form\_fieldset\_entry

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

### FormElementEntry.form\_fieldset\_entry\_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

### FormElementEntry.get\_registered\_plugins()

Gets registered plugins.

### FormElementEntry.get\_registry()

Get registry.

### FormElementEntry.id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

### FormElementEntry.objects = <django.db.models.manager.Manager object>

### FormElementEntry.plugin\_uid

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormElementEntry.position`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**class** `fobi.models.FormFieldsetEntry(*args, **kwargs)`

Bases: `django.db.models.base.Model`

Form fieldset entry.

**exception** `DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception** `FormFieldsetEntry.MultipleObjectsReturned`

Bases: `django.core.exceptions.MultipleObjectsReturned`

`FormFieldsetEntry.form_entry`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`FormFieldsetEntry.form_entry_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormFieldsetEntry.formelemententry_set`

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`FormFieldsetEntry.id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormFieldsetEntry.is_repeatable`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormFieldsetEntry.name`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormFieldsetEntry.objects = <django.db.models.manager.Manager object>`

**class** `fobi.models.FormHandlerEntry(*args, **kwargs)`

Bases: `fobi.models.AbstractPluginEntry`

Form handler entry.

**Properties**

- `form_entry` (`fobi.models.FormEntry`): Form to which the handler plugin belongs to.

- *plugin\_uid* (str): Plugin UID.
- *plugin\_data* (str): JSON formatted string with plugin data.

**exception DoesNotExist**

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception FormHandlerEntry.MultipleObjectsReturned**

Bases: `django.core.exceptions.MultipleObjectsReturned`

**FormHandlerEntry.form\_entry**

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

**FormHandlerEntry.get\_registered\_plugins()**

Gets registered plugins.

**FormHandlerEntry.get\_registry()**

Get registry.

**FormHandlerEntry.id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**FormHandlerEntry.objects = <django.db.models.manager.Manager object>**

**FormHandlerEntry.plugin\_uid**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**class fobi.models.AbstractFormWizardPluginEntry(\*args, \*\*kwargs)**

Bases: `fobi.models.BaseAbstractPluginEntry`

Abstract form wizard plugin entry.

**Properties**

- *form\_entry* (`fobi.models.FormWizardEntry`): FormWizard to which the plugin belongs to.
- *plugin\_uid* (str): Plugin UID.
- *plugin\_data* (str): JSON formatted string with plugin data.

**class Meta**

Meta class.

**abstract = False**

**AbstractFormWizardPluginEntry.entry\_user**

Get user.

**AbstractFormWizardPluginEntry.form\_wizard\_entry**

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`AbstractFormWizardPluginEntry.form_wizard_entry_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

**class** `fobi.models.FormWizardHandlerEntry(*args, **kwargs)`

Bases: `fobi.models.AbstractFormWizardPluginEntry`

Form wizard handler entry.

#### Properties

- `form_wizard_entry` (`fobi.models.FormWizardEntry`): FormWizard to which the handler plugin belongs to.
- `plugin_uid` (str): Plugin UID.
- `plugin_data` (str): JSON formatted string with plugin data.

**exception DoesNotExist**

Bases: `django.core.exceptions.ObjectDoesNotExist`

**exception FormWizardHandlerEntry.MultipleObjectsReturned**

Bases: `django.core.exceptions.MultipleObjectsReturned`

`FormWizardHandlerEntry.form_wizard_entry`

Accessor to the related object on the forward side of a many-to-one or one-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`FormWizardHandlerEntry.get_registered_plugins()`

Gets registered plugins.

`FormWizardHandlerEntry.get_registry()`

Get registry.

`FormWizardHandlerEntry.id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`FormWizardHandlerEntry.objects = <django.db.models.manager.Manager object>`

`FormWizardHandlerEntry.plugin_uid`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

## fobi.settings module

- `RESTRICT_PLUGIN_ACCESS` (bool): If set to True, (Django) permission system for fobi plugins is enabled.
- `FORM_ELEMENT_PLUGINS_MODULE_NAME` (str): Name of the module to placed in the (external) apps in which the fobi form element plugin code should be implemented and registered.
- `FORM_HANDLER_PLUGINS_MODULE_NAME` (str): Name of the module to placed in the (external) apps in which the fobi form handler plugin code should be implemented and registered.
- `FORM_CALLBACKS_MODULE_NAME` (str): Name of the module to placed in the (external) apps in which the fobi form callback code should be implemented and registered.

- *FORM\_HANDLER\_PLUGINS\_EXECUTION\_ORDER* (tuple): Order in which the form handler plugins are to be executed.
- *FORM\_WIZARD\_HANDLER\_PLUGINS\_EXECUTION\_ORDER* (tuple): Order in which the form handler plugins are to be executed.
- *DEBUG*

## fobi.test module

## fobi.utils module

Another helper module. This module can NOT be safely imported from any fobi (sub)module - thus should be imported carefully.

`fobi.utils.get_allowed_plugin_uids(PluginModel, user)`

Get allowed plugins uids for user given.

### Parameters

- **PluginModel** (`fobi.models.AbstractPluginModel`) – Subclass of `fobi.models.AbstractPluginModel`.
- **user** (`django.contrib.auth.models.User`) –

### Return list

`fobi.utils.get_user_plugins(get_allowed_plugin_uids_func, get_registered_plugins_func, registry, user)`

Get user plugins.

Gets a list of user plugins in a form if tuple (plugin name, plugin description). If not yet autodiscovered, autodiscovers them.

### Parameters

- **get\_allowed\_plugin\_uids\_func** (callable) –
- **get\_registered\_plugins\_func** (callable) –
- **registry** (`fobi.base.BaseRegistry`) – Subclass of `fobi.base.BaseRegistry` instance.
- **user** (`django.contrib.auth.models.User`) –

### Return list

`fobi.utils.get_user_plugin_uids(get_allowed_plugin_uids_func, get_registered_plugin_uids_func, registry, user)`

Gets a list of user plugin uids as a list.

If not yet auto-discovered, auto-discovers them.

### Parameters

- **get\_allowed\_plugin\_uids\_func** (callable) –
- **get\_registered\_plugin\_uids\_func** (callable) –
- **registry** (`fobi.base.BaseRegistry`) – Subclass of `fobi.base.BaseRegistry` instance.
- **user** (`django.contrib.auth.models.User`) –

### Return list

`fobi.utils.sync_plugins()`

Sync registered plugins.

Syncs the registered plugin list with data in `fobi.models.FormFieldPluginModel`, `fobi.models.FormHandlerPluginModel` and `fobi.models.FormWizardHandlerPluginModel`.

`fobi.utils.get_allowed_form_element_plugin_uids(user)`

Get allowed form element plugin uids.

`fobi.utils.get_user_form_element_plugins(user)`

Get user form element plugins.

`fobi.utils.get_allowed_form_handler_plugin_uids(user)`

Get allowed form handler plugin uids.

`fobi.utils.get_allowed_form_wizard_handler_plugin_uids(user)`

Get allowed form wizard handler plugin uids.

`fobi.utils.get_user_form_handler_plugins(user, exclude_used_singles=False, used_form_handler_plugin_uids=[])`

Get list of plugins allowed for user.

#### Parameters

- **user** (*django.contrib.auth.models.User*) –
- **exclude\_used\_singles** (*bool*) –
- **used\_form\_handler\_plugin\_uids** (*list*) –

#### Return list

`fobi.utils.get_user_form_wizard_handler_plugins(user, exclude_used_singles=False, used_form_wizard_handler_plugin_uids=[])`

Get list of plugins allowed for user.

#### Parameters

- **user** (*django.contrib.auth.models.User*) –
- **exclude\_used\_singles** (*bool*) –
- **used\_form\_wizard\_handler\_plugin\_uids** (*list*) –

#### Return list

`fobi.utils.get_user_form_handler_plugin_uids(user)`

Get user form handler plugin uids.

`fobi.utils.get_user_form_wizard_handler_plugin_uids(user)`

Get user form handler plugin uids.

`fobi.utils.get_user_plugins_grouped(get_allowed_plugin_uids_func, get_registered_plugins_grouped_func, registry, user, sort_items=True)`

Get user plugins grouped.

#### Parameters

- **get\_allowed\_plugin\_uids\_func** (*callable*) –
- **get\_registered\_plugins\_grouped\_func** (*callable*) –
- **registry** (*fobi.base.BaseRegistry*) – Subclass of `fobi.base.BaseRegistry` instance.
- **user** (*django.contrib.auth.models.User*) –

- **sort\_items** (*bool*) –

**Return dict**

`fobi.utils.get_user_form_element_plugins_grouped(user)`

Get user form element plugins grouped.

`fobi.utils.get_user_form_handler_plugins_grouped(user)`

Get user form handler plugins grouped.

`fobi.utils.get_user_form_wizard_handler_plugins_grouped(user)`

Get user form wizard handler plugins grouped.

## fobi.validators module

`fobi.validators.url_exists(url, local=False)`

Check if URL exists.

**Parameters**

- **url** (*str*) –
- **local** (*bool*) –

**Return bool**

## fobi.views module

Views.

`fobi.views.add_form_element_entry(request, *args, **kwargs)`

Add form element entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **form\_element\_plugin\_uid** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return django.http.HttpResponse**

`fobi.views.add_form_handler_entry(request, *args, **kwargs)`

Add form handler entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **form\_handler\_plugin\_uid** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return django.http.HttpResponse**

`fobi.views.add_form_wizard_form_entry(request, *args, **kwargs)`

Add form wizard form entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_entry\_id** (*int*) –
- **form\_entry\_id** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return `django.http.HttpResponse`**

`fobi.views.add_form_wizard_handler_entry(request, *args, **kwargs)`

Add form handler entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **form\_handler\_plugin\_uid** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return `django.http.HttpResponse`**

`fobi.views.create_form_entry(request, *args, **kwargs)`

Create form entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*str*) –

**Return `django.http.HttpResponse`**

`fobi.views.create_form_wizard_entry(request, *args, **kwargs)`

Create form wizard entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*str*) –

**Return `django.http.HttpResponse`**

`fobi.views.dashboard(request, *args, **kwargs)`

Dashboard.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return `django.http.HttpResponse`**

`fobi.views.delete_form_element_entry(request, *args, **kwargs)`  
Delete form element entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_element\_entry\_id** (*int*) –

**Return `django.http.HttpResponse`**

`fobi.views.delete_form_entry(request, *args, **kwargs)`  
Delete form entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **template\_name** (*string*) –

**Return `django.http.HttpResponse`**

`fobi.views.delete_form_handler_entry(request, *args, **kwargs)`  
Delete form handler entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_handler\_entry\_id** (*int*) –

**Return `django.http.HttpResponse`**

`fobi.views.delete_form_wizard_entry(request, *args, **kwargs)`  
Delete form wizard entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_entry\_id** (*int*) –
- **template\_name** (*string*) –

**Return `django.http.HttpResponse`**

`fobi.views.delete_form_wizard_form_entry(request, *args, **kwargs)`  
Delete form wizard form entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_form\_entry\_id** (*int*) –

**Return `django.http.HttpResponse`**

`fobi.views.edit_form_element_entry(request, *args, **kwargs)`  
Edit form element entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_element\_entry\_id** (*int*) –

- **fobi.base.BaseTheme** – Theme instance.
- **template\_name** (*string*) –

Return **django.http.HttpResponse**

**fobi.views.edit\_form\_entry** (*request*, \*args, \*\*kwargs)

Edit form entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*str*) –

Return **django.http.HttpResponse**

**fobi.views.edit\_form\_handler\_entry** (*request*, \*args, \*\*kwargs)

Edit form handler entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_handler\_entry\_id** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

Return **django.http.HttpResponse**

**fobi.views.edit\_form\_wizard\_handler\_entry** (*request*, \*args, \*\*kwargs)

Edit form handler entry.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_handler\_entry\_id** (*int*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

Return **django.http.HttpResponse**

**fobi.views.export\_form\_entry** (*request*, \*args, \*\*kwargs)

Export form entry to JSON.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_id** (*int*) –
- **template\_name** (*string*) –

Return **django.http.HttpResponse**

**fobi.views.form\_entry\_submitted** (*request*, *form\_entry\_slug=None*, *template\_name=None*)

Form entry submitted.

**Parameters**

- **request** (*django.http.HttpRequest*) –

- **form\_entry\_slug** (*string*) –
- **template\_name** (*string*) –

Return `django.http.HttpResponse`

`fobi.views.form_importer(request, *args, **kwargs)`  
Form importer.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_importer\_plugin\_uid** (*str*) –
- **template\_name** (*str*) –

`fobi.views.form_wizard_entry_submitted(request, form_wizard_entry_slug=None, template_name=None)`

Form wizard entry submitted.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_wizard\_entry\_slug** (*string*) –
- **template\_name** (*string*) –

Return `django.http.HttpResponse`

`fobi.views.form_wizards_dashboard(request, *args, **kwargs)`  
Dashboard for form wizards.

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

Return `django.http.HttpResponse`

`class fobi.views.FormWizardView(**kwargs)`  
Bases: `fobi.wizard.views.dynamic.DynamicSessionWizardView`

Dynamic form wizard.

**done** (*form\_list*, *\*\*kwargs*)  
Done.

**file\_storage** = <django.core.files.storage.FileSystemStorage object>

**get\_context\_data** (*form*, *\*\*kwargs*)  
Get context data.

**get\_initial\_wizard\_data** (*request*, *\*args*, *\*\*kwargs*)  
Get initial wizard data.

**render\_done** (*form*, *\*\*kwargs*)  
Render done.

This method gets called when all forms passed. The method should also re-validate all steps to prevent manipulation. If any form fails to validate, `render_revalidation_failure` should get called. If everything is fine call `done`.

```
fobi.views.import_form_entry(request, *args, **kwargs)
    Import form entry.
```

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **template\_name** (*string*) –

**Return** *django.http.HttpResponse*

```
fobi.views.view_form_entry(request, form_entry_slug, theme=None, template_name=None)
    View created form.
```

**Parameters**

- **request** (*django.http.HttpRequest*) –
- **form\_entry\_slug** (*string*) –
- **theme** (*fobi.base.BaseTheme*) – Theme instance.
- **template\_name** (*string*) –

**Return** *django.http.HttpResponse*

## fobi.widgets module

```
class fobi.widgets.NumberInput(attrs=None)
    Bases: django.forms.widgets.TextInput
```

```
    input_type = u'number'
```

**media**

```
class fobi.widgets.BooleanRadioSelect(*args, **kwargs)
    Bases: django.forms.widgets.RadioSelect
```

Boolean radio select for Django.

**Example**

```
>>> class DummyForm(forms.Form):
>>>     agree = forms.BooleanField(label=_("Agree?"),
>>>                               required=False,
>>>                               widget=BooleanRadioSelect)
```

**media**

```
class fobi.widgets.RichSelect(attrs=None, choices=(), prepend_html=None, append_html=None)
    Bases: django.forms.widgets.Select
```

Rich select widget with some rich enhancements.

Based on original Select widget and intended to be a drop-off replacement.

**media**

```
    render(name, value, attrs=None)
```

Renders the element, having prepended and appended extra parts.

## Module contents

## Quick start

Tutorial for very quick start with `django-fobi`. Consists of several parts listed below:

- Part 1: Standard Django installation
- Part 2: Integration with DjangoCMS (coming soon)

## Part 1: standard Django installation

Example project code available [here](#).

## Installation and configuration

Install the package in your environment.

```
pip install django-fobi
```

## INSTALLED\_APPS

Add `fobi` core and the plugins to the `INSTALLED_APPS` of the your `settings` module.

1. The core.

```
'fobi',
```

2. The preferred theme. Bootstrap 3 theme is the default. If you have chosen a different theme, update the value of `FOBI_DEFAULT_THEME` accordingly.

```
'fobi.contrib.themes.bootstrap3',
```

3. The form field plugins. Plugins are like blocks. You are recommended to have them all installed. Note, that the following plugins do not have additional dependencies, while some others (like `fobi.contrib.plugins.form_elements.security.captcha` or `fobi.contrib.plugins.form_elements.security.recaptcha` would require additional packages to be installed. If so, make sure to have installed and configured those dependencies prior adding the dependant add-ons to the `settings` module.

```
'fobi.contrib.plugins.form_elements.fields.boolean',
'fobi.contrib.plugins.form_elements.fields.checkbox_select_multiple',
'fobi.contrib.plugins.form_elements.fields.date',
'fobi.contrib.plugins.form_elements.fields.date_drop_down',
'fobi.contrib.plugins.form_elements.fields.datetime',
'fobi.contrib.plugins.form_elements.fields.decimal',
'fobi.contrib.plugins.form_elements.fields.email',
'fobi.contrib.plugins.form_elements.fields.file',
'fobi.contrib.plugins.form_elements.fields.float',
'fobi.contrib.plugins.form_elements.fields.hidden',
'fobi.contrib.plugins.form_elements.fields.input',
'fobi.contrib.plugins.form_elements.fields.integer',
'fobi.contrib.plugins.form_elements.fields.ip_address',
'fobi.contrib.plugins.form_elements.fields.null_boolean',
'fobi.contrib.plugins.form_elements.fields.password',
```

```
'fobi.contrib.plugins.form_elements.fields.radio',
'fobi.contrib.plugins.form_elements.fields.regex',
'fobi.contrib.plugins.form_elements.fields.select',
'fobi.contrib.plugins.form_elements.fields.select_model_object',
'fobi.contrib.plugins.form_elements.fields.select_multiple',
'fobi.contrib.plugins.form_elements.fields.select_multiple_model_objects',
'fobi.contrib.plugins.form_elements.fields.slug',
'fobi.contrib.plugins.form_elements.fields.text',
'fobi.contrib.plugins.form_elements.fields.textarea',
'fobi.contrib.plugins.form_elements.fields.time',
'fobi.contrib.plugins.form_elements.fields.url',
```

#### 4. The presentational form elements (images, texts, videos).

```
'easy_thumbnails', # Required by `content_image` plugin
'fobi.contrib.plugins.form_elements.content.content_image',
'fobi.contrib.plugins.form_elements.content.content_text',
'fobi.contrib.plugins.form_elements.content.content_video',
```

#### 5. Form handlers. Note, that some of them may require database sync/migration.

```
'fobi.contrib.plugins.form_handlers.db_store',
'fobi.contrib.plugins.form_handlers.http_repost',
'fobi.contrib.plugins.form_handlers.mail',
```

Putting all together, you would have something like this.

```
INSTALLED_APPS = (
    # Used by fobi
    'django.contrib.auth',
    'django.contrib.contenttypes',
    'django.contrib.sessions',
    'django.contrib.sites',
    'django.contrib.messages',
    'django.contrib.staticfiles',
    'django.contrib.admin',

    # ...
    # Core
    'fobi',

    # Theme
    'fobi.contrib.themes.bootstrap3',

    # Form field plugins
    'fobi.contrib.plugins.form_elements.fields.boolean',
    'fobi.contrib.plugins.form_elements.fields.checkbox_select_multiple',
    'fobi.contrib.plugins.form_elements.fields.date',
    'fobi.contrib.plugins.form_elements.fields.date_drop_down',
    'fobi.contrib.plugins.form_elements.fields.datetime',
    'fobi.contrib.plugins.form_elements.fields.decimal',
    'fobi.contrib.plugins.form_elements.fields.email',
    'fobi.contrib.plugins.form_elements.fields.file',
    'fobi.contrib.plugins.form_elements.fields.float',
    'fobi.contrib.plugins.form_elements.fields.hidden',
    'fobi.contrib.plugins.form_elements.fields.input',
    'fobi.contrib.plugins.form_elements.fields.integer',
    'fobi.contrib.plugins.form_elements.fields.ip_address',
    'fobi.contrib.plugins.form_elements.fields.null_boolean',
```

```

'fobi.contrib.plugins.form_elements.fields.password',
'fobi.contrib.plugins.form_elements.fields.radio',
'fobi.contrib.plugins.form_elements.fields.regex',
'fobi.contrib.plugins.form_elements.fields.select',
'fobi.contrib.plugins.form_elements.fields.select_model_object',
'fobi.contrib.plugins.form_elements.fields.select_multiple',
'fobi.contrib.plugins.form_elements.fields.select_multiple_model_objects',
'fobi.contrib.plugins.form_elements.fields.slug',
'fobi.contrib.plugins.form_elements.fields.text',
'fobi.contrib.plugins.form_elements.fields.textarea',
'fobi.contrib.plugins.form_elements.fields.time',
'fobi.contrib.plugins.form_elements.fields.url',

# Form element plugins
'easy_thumbnails', # Required by `content_image` plugin
'fobi.contrib.plugins.form_elements.content.content_image',
'fobi.contrib.plugins.form_elements.content.content_text',
'fobi.contrib.plugins.form_elements.content.content_video',

# Form handlers
'fobi.contrib.plugins.form_handlers.db_store',
'fobi.contrib.plugins.form_handlers.http_repost',
'fobi.contrib.plugins.form_handlers.mail',

# ...
)

```

## TEMPLATE\_CONTEXT\_PROCESSORS

Add `django.core.context_processors.request` and `fobi.context_processors.theme` to `TEMPLATE_CONTEXT_PROCESSORS` of your *settings* module.

```

TEMPLATE_CONTEXT_PROCESSORS = (
    # ...
    "django.core.context_processors.request",
    "fobi.context_processors.theme", # Obligatory
    "fobi.context_processors.dynamic_values", # Optional
    # ...
)

```

## urlpatterns

Add the following line to `urlpatterns` of your *urls* module.

```

urlpatterns = [
    # ...

    # DB Store plugin URLs
    url(r'^fobi/plugins/form-handlers/db-store/',
        include('fobi.contrib.plugins.form_handlers.db_store.urls')),

    # View URLs
    url(r'^fobi/', include('fobi.urls.view')),

    # Edit URLs

```

```
url(r'^fobi/', include('fobi.urls.edit')),  
  
# ...  
]
```

### Update the database

1. First you should be syncing/migrating the database. Depending on your Django version and migration app, this step may vary. Typically as follows:

```
$ ./manage.py syncdb  
$ ./manage.py migrate --fake-initial
```

2. Sync installed `fobi` plugins. Go to terminal and type the following command.

```
$ ./manage.py fobi_sync_plugins
```

### Specify the active theme

Specify the default theme in your *settings* module.

```
FOBI_DEFAULT_THEME = 'bootstrap3'
```

### Permissions

`fobi` has been built with permissions in mind. Every single form element plugin or handler is permission based. If user hasn't been given permission to work with a form element or a form handler plugin, he won't be. If you want to switch the permission checks off, set the value of `FOBI_RESTRICT_PLUGIN_ACCESS` to `False` in your *settings* module.

```
FOBI_RESTRICT_PLUGIN_ACCESS = False
```

Otherwise, after having completed all the steps above, do log into the Django administration and assign the permissions (to certain user or a group) for every single form element or form handler plugin. Bulk assignments work as well.

- <http://yourdomain.com/admin/fobi/formelement/>
- <http://yourdomain.com/admin/fobi/formhandler/>

Also, make sure to have the Django model permissions set for following models:

- `fobi.models.FormEntry`
- `fobi.models.FormElementEntry`
- `fobi.models.FormHandlerEntry`
- `fobi.contrib.plugins.form_handlers.db_store.models.SavedFormDataEntry`

## Part 2: Integration with DjangoCMS

Coming soon...

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`

- [1.1] Dashboard
- [1.2] Create a form
- [1.3] Edit form - form elements tab active, no elements yet
- [1.4] Edit form - form elements tab active, add a form element menu
- [1.5] Edit form - add a form element (URL plugin)
- [1.6] Edit form - form elements tab active, with form elements
- [1.7] Edit form - form handlers tab active, no handlers yet
- [1.8] Edit form - form handlers tab active, add form handler menu
- [1.9] Edit form - add a form handler (Mail plugin)
- [1.10] Edit form - form handlers tab active, with form handlers
- [1.11] Edit form - form properties tab active
- [1.12] View form
- [1.13] View form - form submitted (thanks page)
- [1.14] Edit form - add a form element (Video plugin)
- [1.15] Edit form - add a form element (Boolean plugin)
- [1.16] Edit form
- [1.17] View form
- [2.1] Edit form - form elements tab active, with form elements
- [2.2] Edit form - form elements tab active, add a form element menu
- [2.3] Edit form - add a form element (Hidden plugin)
- [2.4] Edit form - form handlers tab active, with form handlers
- [2.5] Edit form - form properties tab active
- [2.6] View form
